1. Introduction

This document presents the key findings and latest position (at the time of writing) from the various streamlining, rationalisation and scope optimisation initiatives undertaken by the Programme.

The various initiatives over Cycles 1 to 3 have included:

- Systems Integration Testing (SIT) migration optimisation,
- Requirements to Test Traceability Matrix (RTTM) gap analysis,
- SIT Functional (SIT F) Test Pack and in particular Settlement optimisation
- SIT F and SIT Migration (SIT M) rationalisation
- SIT F MDR test cases descoping
- SIT F New Connections test case additions, and
- Defect management / Business as Usual (BAU) lifecycles.

The processes included data analysis, stakeholder discussions and iterative reviews to ensure accuracy and most importantly coverage. Please note that due to the comprehensive nature of these initiatives, and the different parties involved, there would have been some overlap with the timelines. It is also worth noting that in some cases, due to the elapsed time in reaching a descoping decision, certain cohorts may have executed tests before they were approved to be descoped.

2. Updates

This document is expected to undergo further revision as changes to scope are made over the course of the rest of the test stages. Future incremented versions will be introduced as changes to the scope are proposed and accepted through the governance process.

3. SIT Migration Optimisation

Completed - November 2024

This initiative was borne out of the SIT Migration RTTM review with Code Bodies. Test cases were also analysed with a view to see if other test phases may be better suited to running these tests. A total of 39 test cases were identified as candidates to be moved or were covered by the same process for different meter segments (i.e. Advanced meter or Traditional meter tests not required in lieu of Smart Meter tests).

The results of this exercise can be seen in Appendix A – SIT Migration Optimisation

4. RTTM Gap Analysis (Role-Based)

Completed - October 2024

In association with the Code Bodies, an exercise was undertaken using the SIT F RTTM to identify any unmapped or missing requirements. The analysis included reviewing role-based access control

© Elexon Limited 2025

requirements, identifying missing functional tests, and designing new or modifying existing test cases as appropriate. This exercise resulted in 30 test cases being created, ensuring role-specific test coverage and mitigating any potential risk due to untested scenarios.

The results of this exercise can be seen in Appendix B – RTTM Gap Analysis Additions to Scope

5. Settlement Optimisation

Completed - November 2024

Due to the complexity and effort required to coordinate and execute Settlement tests, an initiative was launched to specifically review the Settlement exit criteria and qualification requirements; and see where efficiency gains could be made without compromising test coverage. Tests were organised into 'sets' with each set having a specific exit criterion based on 'minimum viability'. Where possible and efficient to do so, Settlement test cases were merged to reduce the overhead of execution, whilst still maintaining coverage.

As a result of this optimisation exercise, a total of 83 test cases were able to be descoped. These are shown in Appendix D – Settlement Optimisation.

6. SIT Functional Test Pack Optimisation

Completed - November 2024

In parallel to the Settlement Optimisation initiative, the wider Functional test pack was also reviewed with Code Bodies to identify opportunities for efficiencies and potential deduplication of efforts to prove requirements. This resulted in 49 test cases being identified for descoping, as shown in Appendix C - SIT Functional Pack Optimisation.

7. SIT Functional and SIT Migration Rationalisation

Completed - October 2024

Here the focus was to identify tests that shared the same requirements as at least one other test scenario. This exercise is aimed at streamlining test execution, improving efficiency, and ensuring comprehensive validation without unnecessary duplication.

A total of 60 Functional and Migration test cases were analysed as part of this initiative, identifying 3 Functional tests as candidates for rationalisation. These are highlighted in Appendix E – SIT Functional and Migration Rationalisation.

By the time it was agreed to descope these tests, some (but not all) cohorts had already run these tests successfully. Therefore, rather than formally descoping tests, these tests have now been marked as NA –

© Elexon Limited 2025

indicating to test teams and participants that they are not to be brought into Sprints and any further execution against these is to be ceased. This is managed by the Test Coordinators.

8. SIT Functional MDR Descoped Test Cases

Proposed - February 2025; Approved SITAG – March 2025

The following SIT Functional MDR test cases were candidates proposed for descoping in February 2025 (REF-03). The proposal was approved by SITAG on the 19/3/2025:

- **SITFTS-0260 TC01 Smart**
- **SITFTS-0260 TC02 Smart**
- **SITFTS-0260 TC03 Smart Consent Change**
- **SITFTS-0260 TC04 SRV 5.1 Error**
- **SITFTS-0270 TC01 Smart**

These test cases originally formed part of the proposed MDR Testing coverage, with each requiring a Smart meter to be installed and commissioned in the DCC Test Lab.

Following detailed discussions at the Test Team / Design Triage forum (with SRO members in attendance), it was agreed by consensus that running tests requiring connectivity to physical smart meters via DCC systems is not technically feasible. The SIT Suppliers will not be able to support testing using DCC service request interfaces for the following reasons:

- **Not DCC Users** (2 Suppliers)
- **No connectivity to DCC UIT-B environment** (5 Suppliers). Establishing this connectivity would require significant time and investment

Observations from the SIT Test Approach and Plan

- DCC systems supporting meter connectivity are outside the scope of SIT
- There are no requirements for Suppliers to connect to DCC systems, nor for their systems to be deployed to SIT for such connectivity
- Testing involving actual smart meters is not referenced

In total, there are 5 tests that require Suppliers and MDRs to communicate with DCC systems and meters using interfaces outside the scope of the MHHS design.

Impact and Risk

There is negligible risk associated with not undertaking these tests, as:

© Elexon Limited 2025

- The DCC has already tested MDR connectivity to meters within their own testing programme
- The MHHS processes for transferring MDR MPID data to DCC are covered within the scope of SIT Functional

Test **SITFTS-0260 TC04 SRV 5.1 Error** includes requirement MHHSP-BRS001-SDS-BR-DS-043 (requiring SDS, via an MDR, to manage meter data request rejections from DCC). This is not covered by any other in-scope SIT F test case.

Test **SITFTS-0270 TC01 Smart** includes requirement MHHSP-BRS001-SDS-BR-DS-053 (SDS must consider how best to deal with a failure response for a given MPAN, received from DCC, on Smart Data Service systems in terms of re-attempting to obtain the data prior to resorting to estimation or escalating to the Supplier). This is not covered by any other in-scope SIT F test case.

The requirements for managing DCC service request failures, particularly the failure to obtain meter data from a Smart meter, is not testable in SIT or Qualification as no DCC service will exist in the testing environments. Additionally, the MDR role is out of scope for SIT F and Qualification, meaning these requirements are not applicable to any party under test.

Each MDR will have undergone DCC UEPT testing, which would have tested sending and receiving all relevant service requests.

Test case **SITFTS-0270 TC01 Smart** also includes requirement MHHSP-BRS001-SDS-BR-DS-147-1 (SDS must notify the Supplier of faulty equipment via a D0001 or bilaterally agreed interface). To maintain test coverage this requirement has been included in SIT Operational test case SITOPS-BR08 TC07 SDS 5 WD where it is appropriately mapped and represented.

Conclusion

After undergoing reviews with SRO, Code Bodies, SITWG and SITAG, these test cases were approved to be descoped from SITF on 19 March 2025.

These test cases can be found in Appendix G – SIT Functional MDR Descoped Test Cases

9. New Connections – Test Case Additions

Proposed - February 2025; Approved SITAG – March 2025

The following new test cases were proposed and approved for inclusion in SIT F scope during SITAG on the 28/3/2025:

Theme 1 – New Connections

- SITFTS-0050 TC05 **New Connection Reverse Migration Smart**
- SITFTS-0050 TC06 **New Connection Reverse Migration Advanced**

© Elexon Limited 2025

Rationale:
During a Migration Working Group session conducted in February 2025, feedback was received from a large Supplier requesting clarification on the New Connection Process following industry milestones M10 and M14. In response, two dedicated workshops were held prior to the issuance of the PPIR to address the evaluation and assess the completeness of the current test coverage.

These workshops concluded that, regardless of the outcome of the PPIR, there remained a need to conduct additional tests to provide assurance on the end-to-end functionality of the New Connection Process. The identified test scenarios addressed critical areas not previously validated and aimed to mitigate risks related to market readiness and system integration across parties.

The proposed test cases are to prove that a new connection that is put through an initial registration can be reverse migrated to legacy. These tests cover both Smart and Advanced respectively. While Change of Supplier (CoS) reverse migration scenarios have already been tested under the established reverse migration scope, those scenarios focused on pre-existing MPANs. They did not include cases where an MPAN has been created and registered as part of a New Connection process.

To extend the assurance coverage, the following two test cases have been created:

- **SITFTS-0050 TC05 – New Connection Reverse Migration Smart**
  Validates a newly created Smart Single MPAN from initial registration process to legacy
- **SITFTS-0050 TC06 – New Connection Reverse Migration Advanced**
  Assesses the reverse migration of a newly created Advanced Single MPAN to legacy

The testing scope aligns with existing requirements and does not introduce any new functional changes. These test cases are shown in Appendix H – New Connections Test Case Additions

10. Defect Management and BAU Lifecycle

Defect related test cases are specifically analysed and adjusted as part of BAU and the Programme's defect management strategy. At the time of writing 16 test cases have been descoped due to defects, however this is an ongoing process.

Descoped tests relating to defects can be found in Appendix F - Defect Management and BAU Lifecycle

11. Summary

The table below provides a summary of the total number of tests cases added / descoped / rationalised from the Programme, grouped by Themes, over Cycles 1-3 (to date). The rationalisation and optimisation initiatives ensure that testing is efficient, targeted, and aligned with overall project objectives while maintaining high-quality assurance standards.

14. Appendix C - SIT Functional Pack Optimisation

Theme	Timing	Scenario Ref	Test Case Name	Reason for De-scoping	Additional Comments
1 - New Connections	Cycle 2	SITFTS-0090 New Connection MS Change Re-Submit	SITFTS-0060 TC02 Unmetered	In agreement with SI Design; Test unachievable due to upstream validation in Supplier Systems.	***SITFTS-0060 TC01 Smart Metered*** de-scoped and ***SITFTS-0060 TC02 Unmetered*** reassigned as ***SITFTS-0060 TC01 Unmetered***. Both variants transpired to be untestable by PPs. Given the consideration for potential viability as a Qualification TC, ***SITFTS-0060 TC01 Smart Metered*** **and** ***SITFTS-0060 TC02 Unmetered*** **will be re-listed.**
2 - Change of Registration	Cycle 1	SITFTS-1010 Registration data update for legacy data items	SITFTS-1010 TC03 traditional, legacy data update (Profile Class Update Only)	Replaced by new incarnation ***SITFTS-1010 TC03 Advanced, legacy data update*** that covers the ***IF-025/PUB-025 [SSCandProfileClass]*** for the Advanced variant. The Trad variant is now covered by ***SITFTS-1010 TC01 Traditional, legacy data update***	***SITFTS-1010 TC05 Smart, legacy data update Individual Profile Class & SSC updates*** drafted that covers unilateral changes to the Profile Class and the SSC, independent of each other: 1. Transition of Profile Class from NULL to valid data entry; 2. Transition of SSC from current value to new valid data entry.
3 - Change of Supplier	Cycle 1	SITFTS-0020 Change of Supplier and DS, no change of MS	SITFTS-0020 TC03 Unmetered	In agreement with SI Design, Conditions specified in the test case cannot be produced in SITF.	Replaced by ***SITFTS-0020 Change of Supplier and DS, no change of MS, TC06 Unmetered***
3 - Change of Supplier	Cycle 1	SITFTS-0020 Change of Supplier and DS, no change of MS	SITFTS-0020 TC05 Smart Single	In agreement with SI Design SITFTS-0020 TC05 is invalid. The associated requirements are covered elsewhere.	Descoped TC05 due to misinterpretation of requirement MHHS-BR-RS-058 this has since been correctly moved to TC01 after discussions with the design team. Requirements also map to SITFTS-0020 TC01 Ref: Defect 32614

© Elexon Limited 2025

Theme	Timing	Scenario Ref	Test Case Name	Reason for De-scoping	Additional Comments
5 - Change of Metering	Cycle 1	SITFTS-0105 Change of MS, no change of supplier or DS	SITFTS-0105 TC05 Unmetered Accepted	Untestable in SITF as there is only one UMSO participant in SITF (can't change an unmetered MS when there is only one UMSO)	
5 - Change of Metering	Cycle 1	SITFTS-0105 Change of MS, no change of supplier or DS	SITFTS-0105 TC06 Unmetered Lapsed	Untestable in SITF as there is only one UMSO participant in SITF (can't change an unmetered MS when there is only one UMSO)	
6 - Metering Changes	Cycle 2	SITFTS-0905 Change of meter - Registration Service Rejections	SITFTS-0905 TC03 Smart Install	Intention of the test deemed to be invalid in consultation between the TA and SI/SRO design.	Each test case covers a different validation rule failure, some have proven replicable by PPs in cohorts, and have passed, others have not. In the case of TC03 the PP's were unable to set the data conditions to trigger validation rule. Given the consideration for potential viability as a Qualification TC, ***SITFTS-0905 TC03 Smart Install*** **will be re-listed.**
7 - Consumption	Cycle 2	SITFTS-0012 Consumption on Change of Supplier, no change of MS	SITFTS-0012 TC03 Advanced	The test runs CoS process with no consumption issued at the end; agreed superfluous with SI/SRO design.	Early scoping decision since revised
7 - Consumption	Cycle 2	SITFTS-0012 Consumption on Change of Supplier, no change of MS	SITFTS-0012 TC04 Unmetered	The test runs CoS process with no consumption issued at the end; agreed superfluous with SI/SRO design.	Early scoping decision since revised
7 – Consumption	Cycle 3	SITFTS-0260 TC01 Smart, Supplier is not MDR	SITFTS-0260 TC01 Smart	The proposed MDR test cases each require a Smart meter to be installed and commissioned in the DCC Test Lab. These were discussed at the Test Team / Design Triage forum	Proposed for descope and approved by SITAG on 19 March 2025

Theme	Timing	Scenario Ref	Test Case Name	Reason for De-scoping	Additional Comments
				other SIT F test case. The remaining four tests involve requirements already validated elsewhere in SIT. However, this specific requirement cannot be tested in SIT or Qualification due to the absence of DCC services, and because the MDR role is out of scope for both phases. This functionality has already been assured through DCC UEPT testing, where each MDR has tested the relevant service request flows.	
7 - Consumption	Cycle 3	SITFTS-0270 Smart	SITFTS-0270 Smart	The proposed MDR test cases each require a Smart meter to be installed and commissioned in the DCC Test Lab. These were discussed at the Test Team / Design Triage forum (including SRO members), where it was agreed that testing involving physical smart meter connectivity via DCC systems is not technically feasible	Proposed for descope and approved by SITAG on 19 March 2025
7 - Consumption	Cycle 1	SITFTS-0530 Consumption IF-021 Invalid Data Rejected by LSS	SITFTS-0530 TC01 Smart	Scope now covered by scenario **MHHS-DEL2152 SITFTS-ST0070 LSS Reject and Default TC09**

8 - Settlement	Cycle 2	SITFTS-ST0053 MDS D0297 MPAN_ABMU Mapping	ST0053 TC02 D0297 MPAN_ABMU Mapping Advanced	Replaced by and consolidated into *SITFTS-ST0053 MDS D0297 MPAN_ABMU Mapping, TC01 ABMU Normal Settlement*.	DAH is a Helix app/database and the test case does cover DAH engagement in as much that DAH is used to record and store MPAN_ABMU mappings, from where they are available to MDS. During the settlements process, MDS will interrogate the DAH application to determine whether a MPAN is mapped to an ABMU. If it is, that ABMU will be used for consumption aggregation and reporting. This is in scope for SITF testing and is the subject of this test case which will cover settling normally for test subject MPANs (identified by Helix) that have been mapped to ABMUs on the DAH application. Coverage will include the creation of MDS and VAS reports with Helix verifying the report contents, including that consumption has been aggregated at the ABMU level, as expected.
8 - Settlement	Cycle 2	SITFTS-ST0053 MDS D0297 MPAN_ABMU Mapping	ST0053 TC03 Rejection of D0297 MPAN_ABMU Mapping	BAU process; no residual risk not covered elsewhere.	
8 - Settlement	Cycle 2	SITFTS-ST0054 - Update DUoS Tariff Id	ST0054 TC02 Advanced	Replaced by and consolidated into *SITFTS-ST0054 Update DUoS Tariff Id, TC01 Update DUoS Tariff ID Smart; no value added by this data variant.*

16. Appendix E – SIT Functional and Migration Rationalisation

Theme	Test Unique Ref	Test Case Name	Comments
2 - Change of Registration	SITFTS-1010 TC02	SITFTS-1010 TC02 - smart, legacy data update	05/12 [DG] Agreed process running is the same as TC01 Smart only difference is meter type
6 - Metering Changes	SITFTS-0850 TC02	SITFTS-0850 TC02 Traditional	Functionality seems to be the same as TC01, with slight req mapping differences
			05/12 [DG] this is running the same process as above
6 - Metering Changes	SITFTS-0900 TC02	SITFTS-0900 TC02 Smart Install	Broadly covered by SITFTS-0050 TC01, except for 1 req that is covered elsewhere; good candidate for rationalisation
			05/12 [DG] Agreed, this test was in scope as we wanted to see that a meter install could be completed before running the longer new connection test (SITFTS-0050 TC01) that also involves a meter install

© Elexon Limited 2025

17. Appendix F - Defect Management and BAU Lifecycle

Theme	Timing	Scenario Ref	Test Case Name	Root Cause Defect	Reason for De-scoping	Additional Comments
1 - New Connections	Cycle 1	SITFTS-0060 Create MPAN, Services not immediately appointed	SITFTS-0060 TC01 Smart Metered	33161	Upstream validation in Supplier Systems means it is not possible to create the conditions for setting a Service Appointment Date before the Supply start date. The negative condition cannot be created in SIT F.	*SITFTS-0060 TC01 Smart Metered* de-scoped and *SITFTS-0060 TC02 Unmetered* reassigned as *SITFTS-0060 TC01 Unmetered*. Both variants transpired to be untestable by PPs. Given the consideration for potential viability as a Qualification TC, *SITFTS-0060 TC01 Smart Metered* and *SITFTS-0060 TC02 Unmetered* will be re-listed.

© Elexon Limited 2025

Theme	Timing	Scenario Ref	Test Case Name	Root Cause Defect	Reason for De-scoping	Additional Comments
1 - New Connections	Cycle 2	SITFTS-0090 New Connection MS Change Re-Submit	SITFTS-0090 TC02 Traditional Metered	32395	In agreement with SI Design Conditions can't be created by the third Party outside the Registration Service.	*SITFTS-0090 TC02* requires MS appointment date to be set to greater than 28 days in future. These upstream conditions cannot be created by PPs to trigger the necessary REGS response (see ADO Defect *32395*). Note: Each test case variant in the *SITFTS-0900* scenario is designed to target a different REGS validation rule, so they are not equivalent. The circumstances that trigger each rule are not identical. We are finding that for some validation rules, some PPs can create the conditions and for others none of the cohorts can. TC01, TC03 and TC04 are Smart, Unmetered and Advanced variables of this test with different MS appointment criteria. Given the consideration for potential viability as a Qualification TC, *SITFTS-0090 TC02 Traditional Metered* will be re-listed.

Theme	Timing	Scenario Ref	Test Case Name	Root Cause Defect	Reason for De-scoping	Additional Comments
2 - Change of Registration	Cycle 2	SITFTS-0980 Registration data update for Metered Indicator	SITFTS-0980 TC01	35193	PP systems can't support the Business Process for BPM011 in SITF and cannot change the Metered Indicator.	
2 - Change of Registration	Cycle 2	SITFTS-0980 Registration data update for Metered Indicator	SITFTS-0980 TC02	35193	PP systems can't support the Business Process for BPM011 in SITF and cannot change the Metered Indicator.	
2 - Change of Registration	Cycle 2	SITFTS-0980 Registration data update for Metered Indicator	SITFTS-0980 TC03	35193	PP systems can't support the Business Process for BPM011 in SITF and cannot change the Metered Indicator.	

© Elexon Limited 2025

Theme	Timing	Scenario Ref	Test Case Name	Root Cause Defect	Reason for De-scoping	Additional Comments
2 - Change of Registration	Cycle 1	SITFTS-1010 Registration data update for legacy data items	SITFTS-1010 TC04 smart, legacy data update (SSC Update Only)	31814	As per Defect 31814, profile class and SSC cannot be updated individually, making this test unviable.	*SITFTS-1010 TC05 Smart, legacy data update Individual Profile Class & SSC updates* drafted that covers unilateral changes to the Profile Class and the SSC, independent of each other: 1. Transition of Profile Class from NULL to valid data entry; 2. Transition of SSC from current value to new valid data entry.
6 - Metering Changes	Cycle 2	SITFTS-0862 MET Market Segment Change during COS	SITFTS-0862 TC01 Smart to Advanced Market Segment Change	35662	The design provides no mechanism for dealing with this scenario, and as Change of Segment and Change of Supplier are covered elsewhere, the intent of this test case is invalid and needs to be descoped.	The edge case of the CoS and Market Segment case being processed on the same day should be covered as part of an operational testing scenario that orchestrates execution of the individual SIT F test cases for CoS and Mkt Segment change. This would address the risk of this eventuality in production.

© Elexon Limited 2025

Theme	Timing	Scenario Ref	Test Case Name	Root Cause Defect	Reason for De-scoping	Additional Comments
6 - Metering Changes	Cycle 3	SITFTS-0880 Advisory Notifications for a missing Services & Invalid Market Segment	SITFTS-0880 TC01 Adv to Smart Conn Type, Market Seg Change	43693, 39959, 39708, 35699	SITFTS-0880 TC01 Has been descoped because you cannot trigger service reminders by setting appointment date in the future as this will fail validation rule when attempting to conduct meter exchange. A new test case has been created *SITFTS-0880 TC04* after discussions with the design team. The new amended test now runs a CoS where no new meter service is appointed (IF-031 is not issued). When secured active is confirmed metering service de-appointment is then triggered and, given there is no new incoming meter service, registration reminders are triggered after 7 days	
7 – Consumption	Cycle 2	SITFTS-0132 Consumption on Change of Data Service, Transfer of Reads	SITFTS-0132 TC04 Unmetered	35705	Invalid test case. There is no consumption adjustment on change of Unmetered Data Service.	Unmetered Data service does not process consumption adjustment for a change of supplier. TC04 Was descoped on the basis that it was an Unmetered test case and there is no consumption adjustment on an unmetered site this has been verified by design

18. Appendix G – SIT Functional MDR Descoped Test Cases

Approved for descoping by SITAG on 19 March 2025

Theme	Test Unique Ref	Test Case Name	Comments
7 - Consumption	SITFTS-0260 TC01	SITFTS-0260 TC01 Smart	The MDR test case requires a Smart meter to be installed and commissioned in the DCC Test Lab. Testing involving physical smart meter connectivity via DCC systems is not technically feasible due to: - Two SIT Suppliers are not DCC users - Five Suppliers lack connectivity to the DCC UIT-B environment, and establishing it would require significant time and investment This test requires communication with DCC systems using interfaces that fall outside the MHHS design scope. As per the SIT Test Approach and Plan, DCC systems for meter connectivity are out of scope, there are no requirements for Suppliers to connect to DCC or deploy related systems in SIT and testing involving actual smart meters is not included Minimal risk, as the DCC has already tested MDR connectivity within its own programme and SIT Functional scope covers the necessary MPID data transfers to DCC.
7 - Consumption	SITFTS-0260 TC02	SITFTS-0260 TC02 Smart	The MDR test case requires a Smart meter to be installed and commissioned in the DCC Test Lab. Testing involving physical smart meter connectivity via DCC systems is not technically feasible due to: - Two SIT Suppliers are not DCC users - Five Suppliers lack connectivity to the DCC UIT-B environment, and

			transfers to DCC.
7 - Consumption	SITFTS-0260 TC04	SITFTS-0260 TC04 SRV 5.1 Error	Test case SITFTS-0260 TC04 covers requirement MHHSP-BRS001-SDS-BR-DS-043 (SDS must manage DCC meter data request rejections via an MDR), which is not covered in any other SIT F test case. This specific requirement cannot be tested in SIT or Qualification due to the absence of DCC services, and because the MDR role is out of scope for both phases. This functionality has already been assured through DCC UEPT testing, where each MDR has tested the relevant service request flows.
7 - Consumption	SITFTS-0270 TC01	SITFTS-0270 Smart	Test case SITFTS-0270 TC01 includes the following two requirements, not covered in SIT F: • MHHSP-BRS001-SDS-BR-DS-053 (SDS must handle failure responses from DCC, including re-attempting data retrieval before escalating to the Supplier) which is not covered in any other SITF test case. This specific requirement cannot be tested in SIT or Qualification due to the absence of DCC services, and because the MDR role is out of scope for both phases. • MHHSP-BRS001-SDS-BR-DS-147-1 (SDS must notify the Supplier of faulty equipment via a D0001 or bilaterally agreed interface) is mapped to SIT Operational test case SITOPS-BR08 TC07 SDS 5 WD. SITFTS-0270 TC01 requires communication with DCC systems using interfaces that fall outside the MHHS design scope.

19. Appendix H – New Connections Test Case Additions

Approved for inclusion by SITAG on 28 March 2025

Theme	Test Unique Ref	Test Case Name	Comments
1 – New Connections	SITFTS-0050 TC05	SITFTS-0050 TC05 - New Connection Reverse Migration Smart	This test case validates the reverse migration of a newly created Smart Single MPAN from the initial registration process to the legacy system, ensuring end-to-end functionality.
1 – New Connections	SITFTS-0050 TC06	SITFTS-0050 TC06 - New Connection Reverse Migration Advanced	This test case assesses the reverse migration of a newly created Advanced Single MPAN to legacy, focusing on ensuring the process works correctly for newly registered MPANs.
