1.0	Final	05/09/2023	REC Code Manager	Approved by PAB
1.1	Draft	19/03/2024	REC Code Manager	Draft for PAB approval. Changes include: • Addition of Non-Functional and Migration Requirements • Updates to align with the latest version of the Qualification Approach and Plan • General housekeeping changes
2.0	Final	26/03/2024	REC Code Manager	V1.1 approved by PAB for publication
2.1	Draft	18/06/2024	REC Code Manager	Draft for PAB approval. Changes include: • Addition of Operational Testing Requirements • Updates to align with the latest version of the Qualification Approach and Plan and its annexes • General housekeeping changes
2.0	Final	25/06/2024	REC Code Manager	V2.1 approved by PAB for publication

Contents

2 INTRODUCTION

The Marketwide Half Hourly Settlement (MHHS) Programme is a major reform within the Electricity sector sponsored by Ofgem with the objective to develop and then implement an enduring process for MHHS that delivers benefits for consumers by maximising the opportunities provided by smart metering in enabling an intelligent, flexible electricity system. MHHS will change many processes that are governed under the Balancing and Settlement Code (BSC). However, it will also result in changes under the Retail Energy Code (REC), which will need changes to processes for electricity Suppliers, electricity Metering Equipment Managers (MEMs), Distribution Network Operators (DNOs, including the Registration Service operated by DNOs), Electricity Enquiry Service (EES) and Central Switching Service (CSS), with associated technology changes.

2.1 MHHS QUALIFICATION

The MHHS Programme does not deliver Qualification activities, with this responsibility remaining with the Balancing and Settlement Code Company (BSCCo) and the REC Code Manager.
MHHS Qualification assesses whether Programme participants that plan to operate in MHHS arrangements, have the appropriate systems, processes and controls in place to undertake relevant BSC and REC processes.
To assess this, the REC Code Manager and BSCCo are jointly developing the Qualification process in consultation with Programme participants through the Qualification Working Group (QWG).

2.2 ROLE OF THE REC PERFORMANCE ASSURANCE BOARD (PAB)

The REC PAB's role within the MHHS Qualification process is to:
* Set the policy, approach, and risk appetite for MHHS Qualification under REC.
* Take key decisions on the nature, extent, and timing of assurance activities.
* Discharge the responsibility to make individual Qualification decisions to the REC Code Manager.

2.3 APPROACH FOR MHHS QUALIFICATION

The REC Code Manager, jointly with the BSCCo, is responsible for developing two key artefacts for Qualification – the Qualification Approach and Plan (QA&P) and the Qualification Assessment Document (QAD).
The QA&P sets out the purpose of Qualification during the MHHS Programme and the high-level plan and requirements for Programme participants in relation to the BSC and REC. The latest version (v2.0) of the QA&P was published in April 2024, following approval from the Qualification Advisory Group (QAG) of the MHHS Programme and the REC and BSC PABs. The Code Bodies (REC Code Manager and BSCCo) will continue to update this on an iterative basis as additional information is published by the MHHS Programme, with the expectation to baseline the document in August 2024. The Code Bodies have developed the Qualification Assessment Document (QAD) that is based on the principles set within the QA&P and provides a detailed view on MHHS Qualification requirements

for Programme participants by market roles they intend to operate in the new arrangements. This document will be further iterated with the baseline expected to be delivered in August 2024.

To develop this, the REC Code Manager, along with RECCo, has reviewed the business, migration, non-functional, and operational requirements by role for DNOs, electricity Suppliers and electricity MEMs published by MHHS Programme to identify areas relevant for REC, assessed the associated retail risks, and developed the assessment criteria by role as outlined in this document and approved by REC PAB. This is based on the existing requirements within the current design baseline. Some areas of design are still outstanding, e.g. lower-level service management requirements. We expect these to be developed by Elexon and tested centrally through SIT Operational testing facilitated by MHHS Programme. These may also need to be tested during PIT and covered through questions within the QAD. Whilst the Code Manager has anticipated how these would be covered during Qualification, this document may require further updates once further clarity on the lower-level detail is available from the MHHS Programme.

2.4 HIGH-LEVEL REQUIREMENTS FOR QUALIFICATION

To complete MHHS Qualification, a Programme participant needs to complete the following:

- Pre-Integration Testing (PIT)[1]: All participants will complete internal testing to evidence they have designed, built and tested their systems to operate within the MHHS arrangements. This evidence will be used to also cover risks where testing is not possible in the central integrated environment, as well as in cases where sufficient assurance can be gained from the review of PIT evidence, and further testing within the central integrated environment is not required.

- System Integration Testing (SIT) or Qualification Testing (QT): Depending on the route to Qualification a participant opts for, they will need to complete end-to-end testing in an integrated environment either through SIT facilitated by the Programme, or through QT facilitated by the Code Bodies to prove interoperability with other Market Participants.

- QAD: All participants will complete the QAD, where they will provide details and evidence that their business solution – comprising business processes, local work instructions, management procedures and IT applications – meets their Code requirements that are changing.

---

[1] As per the E2E Testing and Integration Strategy published by MHHS Programme, Programme participants are expected to carry out a final test where all components are tested for business scenarios in an end-to-end manner which is often referenced as User Acceptance Testing (UAT). PIT refers to this UAT and not to any earlier tests carried out as part of development.

3　APPROACH FOR QUALIFICATION TESTING

3.1 PURPOSE OF QUALIFICATION TESTING

The REC Code Manager and BSCCo will use Qualification Testing to satisfy the following objectives:

- Mitigating risk: Testing beyond what has been tested by the Participant in PIT, allows us to cover high-risk interfaces and business processes.
- Efficiency during QAD completion: By conducting a test, we can reduce the amount of evidence required to demonstrate participant's ability to meet the requirements.
- Efficiency during testing review: To have a test conducted with defined scripts mitigates the risk of different parties operating the test differently.

3.2 ASSUMPTIONS

The REC Code Manager has made the following assumptions, which may be revised as further information is made available:

- No Qualification Testing will be required where MHHS requirements are entirely reflective of existing functionality. For example, existing Data Transfer Network (DTN) interfaces that will be retained under MHHS, Supplier interfaces with CSS, execution of on-site metering works by MEMs.
- The Data Interface Platform (DIP) Manager / MHHS Programme will support Programme participants' onboarding to the DIP, including appointment of security officers and provision of testing security certificates.
- Previously, we had assumed the DIP Manager / MHHS Programme will provide a minimum level of DIP Connectivity Testing, which covers testing the sending / receipt of each DIP Interface relevant to each market role the participant is applying to qualify for, and were intending to place reliance on this testing to support Qualification. However, the scope of testing completed as part of DIP onboarding has been clarified and is no longer expected to cover the sending / receipt of each DIP interface relevant to each market role the participant is applying to qualify for. Therefore, requirements previously marked as covered by DIP Connectivity Testing in version 1 of this document have been moved into the scope for Qualification Testing from version 2 onwards.
- No testing is required for the Unmetered Supplies Operator (UMSO) under the REC.
- Registration Service functionality relating to exchange and validation[2] of DIP Interfaces sits with the Supplier Meter Registration Service (SMRS) under the Balancing and Settlement Code (BSC)

---

[2] The IF/PUB messages sent over the DIP are subject to the following validation checks:
- The DIP will check for errors within message structure and invalid values within fields (i.e., character type and length, but not combination of values) at the following levels:
  - Level 1: Synchronous errors that are returned by the API.
  - Level 2: Asynchronous errors that are returned using a message status transaction.
- The recipient will perform the following validation checks wherein the combination of values will be checked for errors:
  - Level 3: Synchronous errors that are returned using a message status transaction.

governance. Therefore, REC will place reliance on BSC testing, provided this includes testing of all DIP interactions relevant to the Registration Service role using a version of the MPRS solution hosted by each DNO.

- The User Interface Testing (UIT) environment will include integration with DIP to cover level 1 and level 2 validation[2] of DIP interface flows during testing.

- The UIT environment will include integration with the Registration Service, or a Registration Service emulator will be available to support testing, to cover level 3 and level 4 validation[2] and business rule validation[2] completed by the Registration Service.

- Where Qualification Testing is required in the UIT environment, SIT test scenarios will cover the required scope of testing and will be adapted for use by the REC Code Manager and BSCCo. Where required, test scenarios may be combined to facilitate end-to-end scenarios which allow coverage of more requirements through fewer tests.

- Appointment of Data Service, Transfer of Reads, Data Collection, Data Processing, Annual Consumption and Consumption Amendment processes are not governed under the REC and therefore not captured in this document. The Code Manager will place reliance on BSC-led testing to mitigate any associated REC risks.

- MEMs will need to specify whether they wish to Qualify for Smart and / or Advanced Market Segments and their individual Qualification requirements will reflect this. This may require creation of additional test case variants to ensure each participant can demonstrate sufficient coverage of the Market Segment they intend to operate.

- At present, the Supplier role doesn't accommodate Qualification to be restricted to only Smart or only Advanced Market Segment. Therefore, all Suppliers will be required to demonstrate they have systems and processes in place to manage both Market Segments to gain MHHS Qualification. Whilst PAB are considering some exemption on this topic, until those are approved and implemented through the required governance routes, Suppliers are required to proceed with their MHHS Qualification on the basis that not exemptions are permitted from Smart and or Advanced Market Segment requirements.

- BSC PAB have however approved that Suppliers who do not operate or intend to operate Unmetered Supplies (UMS) can opt for an exemption from those requirements for MHHS Qualification. These are governed under the BSC only and therefore do not impact the Supplier's scope for MHHS Qualification under the REC.

- Migration Design will be tested through SIT. Qualification Testing will assure individual Participants' ability to complete Migration scenarios.

- o Level 4: Asynchronous errors that are returned using a message status transaction.
- o Level 5: Business Process Validation (e.g., the request date is on or after the MPAN creation date) returned using a defined IF/PUB message.
- o Level 6: Third Party Request Outcome i.e. where the request is accepted or rejected using a defined IF/PUB message.

- Non-Functional Requirements will be assured in line with the approach proposed within MHHS-DEL2128 NFR Categorisation document produced by MHHS Programme through consultation with the Non-Functional Testing Working Group (NFTWG) and reviewed by BSC and REC.

- Operational Design will be tested through SIT. Code Bodies intend to use Qualification Testing to gain additional assurance on Participants' ability to meet key requirements such as Operational Choreography timescales. Testing of some of these requirements within Qualification Testing may be combined with Functional Test Scenarios to streamline testing execution.

- As the Central and Participant systems used in Qualification Testing are not expected to be scaled environments, Code Bodies will rely on PIT to assure Participants' ability to meet certain non-functional and operational requirements. This will also be supplemented with questions within the QAD where the Participant will be required to describe controls they will operate to ensure requirements are met along with an assertion from the Company Director that their systems are compliant and will meet Code requirements.

4 REC ASSESSMENT CRITERIA FOR MHHS QUALIFICATION

The following assessment criteria by role has been developed by the REC Code Manager and approved by REC PAB on 05 September 2023. This may be updated as further information is published by the MHHS Programme.

4.1 FUNCTIONAL REQUIREMENTS

The following assessment criteria to cover MHHS Business Requirements (Functional) by role has been developed by the REC Code Manager and approved by REC PAB on 05 September 2023. This will be updated as further information is published by the MHHS Programme. This is based on:

- MHHSP-BRS002 Metering Services Requirements v5.5

- MHHSP-BRS003 Registration Services Requirements v5.4

- MHHSP-BRS004 Supplier Overview Requirements v5.2

- MHHSP-BRS005 LDSO Overview Requirements v5.2

4.1.1 DNO (INCLUDING REGISTRATION SERVICE)

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
DNO	MEM Appointment – DNO requires MEM details to support metering activities	MHHS-BR-LD-002	LDSO must obtain Metering Service de-appointments via the appropriate interface on the Data Integration Platform and maintain records accordingly. In the case where Related MPANs or Import/Export linked meters exist, LDSO should expect to receive de-appointment notifications for all the MPANs in the Related MPAN or Import/Export group.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	Existing requirement – MHHS change is limited to the use of the DIP (IF036 / IF037)

DNO can check MEM details via the EES. | ✓ | ✓ | ✓ | QAD question to determine whether the DNO is amending existing systems / processes.

PIT evidence demonstrating how the DNO maintains MEM appointment data

Where the DNO is using the DIP, the Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. |
| | | MHHS-BR-LD-003 | LDSO must obtain Metering Service notification updates via the appropriate interface on the Data Integration Platform, maintain records accordingly and investigate any discrepancies with data received from the Metering Service via the DTN. In the case where Related MPANs or Import/Export linked meters exist, LDSO should expect to receive appointment notifications | | | | | | | |

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
			for all the MPANs in the Related MPAN or Import/Export group.							
		MHHS-BR-LD-021	LDSO must obtain Service Provider de-appointment notifications via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
DNO	Energisation Status Details - DNOs requires details of energisation status change and associated reads	MHHS-BR-LD-024	LDSO must obtain updates on Change of Energisation status via the appropriate interface on the Data Integration Platform and maintain records accordingly.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	Existing requirement – MHHS change is limited to the use of the DIP (IF008, IF041) and receipt of data from Data Service (D0010). DNO can check energisation status via the EES.	✓	✓	✓	QAD question to determine whether the DNO is amending existing systems / processes. PIT evidence demonstrating how the DNO maintains Energisation Status data. Where the DNO is using the DIP, the Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing.
		MHHS-BR-LD-025	LDSO must receive Change of Energisation cumulative reads sent by the Metering Service via the appropriate interface and maintain records accordingly.							
		MHHS-BR-LD-026	LDSO must receive Change of Energisation register reads from the Data Service via the appropriate interface and maintain records accordingly.							
DNO	DNO Change of Energisation Status – DNO requirements to take and share reads when they change the	MHHS-BR-LD-022	LDSO must be able to receive a Change of Energisation status request via the appropriate interface.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	Existing requirement – MHHS change is limited to the new market roles for MEM DTN messages (D0139 / D0179)	✓	✓		QAD question regarding the change required to reflect the new MEM Market Roles within DTN messaging. PIT evidence demonstrating testing completed using the new DTN market roles. No Qualification Testing expected.
		MHHS-BR-LD-023	LDSO must be able to process a Change in Energisation status and provide the outcome and reads, where appropriate, to the

	on request from the MEM.			errors that impact consumers.						completed using the new DTN market roles.

No Qualification Testing expected. |
| DNO | Disconnection – DNO to disconnect metering point and send notifications | MHHS-BR-LD-016 | LDSO must be able to receive a customer disconnection request and carry out the physical disconnection where the request is valid. | Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers. | Low | Existing requirement – MHHS change is limited to receipt of disconnection notification from the SMRS (IF-009) | ✓ | ✓ | ✓ | QAD question to determine whether the DNO is amending existing systems / processes.

PIT evidence demonstrating how the DNO maintains connection status of metering points.

Where the DNO is using the DIP, the Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. |
		MHHS-BR-LD-017	LDSO must be able to receive a disconnection request from the Supplier via the appropriate flow and carry out the physical disconnection where the request is valid.							
		MHHS-BR-LD-018	LDSO must update records of any disconnected MPANs and notify the Registration Service on completion of a physical disconnection via an internal flow.							
		MHHS-BR-LD-019	LDSO must be able to send a rejection to the Supplier with a rejection reason, where the disconnection request is not valid, via the appropriate interface.							
		MHHS-BR-LD-020	LDSO must obtain details of disconnections from the Registration Service via the appropriate interface on the Data Integration Platform.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
DNO	Meter Removal – existing requirements to remove meters e.g. emergencies	MHHS-BR-LD-031	LDSO must follow existing processes for notifying Suppliers and Metering Services of any LDSO led removal of metering equipment (e.g. Emergencies).	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	Existing requirement – MHHS change is limited to the new market roles for MEM DTN messages (D0010)	✓	✓		QAD question regarding the change required to reflect the new MEM Market Roles within DTN messaging. PIT evidence demonstrating testing completed using the new DTN market roles. No Qualification Testing expected.
DNO	Address Data – DNOs required to maintain MPL Address	MHHS-BR-LD-033	LDSO must send notification to the Registration Service of any changes of MPL Address and/or GSP Group ID via internal interface.	Retail Risk 6: Inaccurate Address Management data results in errors that impact consumers.	Low	Existing requirement – no change for MHHS	✓			QAD question to confirm whether any changes have been made to existing systems / processes. No Qualification Testing expected.
DNO	Domestic Premise Indicator / Energy Direction / Metered Status	MHHS-BR-RS-034	Registration Service must check for any linked Export MPANs when a Metering Service appointment has been confirmed.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	MHHS change is limited to the use of the DIP (IF018). DNO can check MTDs via the EES.	✓	✓	✓	QAD question to determine whether the DNO is amending existing systems / processes. PIT evidence demonstrating how the DNO maintains Related Metering Point data. Where the DNO is using the DIP, the Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing.
		MHHS-BR-RS-040	Registration Service must hold a history of Metering Service customer direct contract flags against each MPAN. This must consist of the following new data items: Customer Direct Contract Metering Service DIP ID Customer Direct Contract Metering Service Effective To Date.							
		MHHS-BR-RS-043	Registration Service must obtain Supplier Service Appointment Requests for a proposed Data Service via the appropriate							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
			interface on the Data Integration Platform.							
DNO	Related Metering Points – DNOs required to maintain records	MHHS-BR-LD-037	LDSO must obtain successful Related MPAN updates, issued by Registration Service on the Data Integration Platform, via the appropriate interface and maintain records accordingly.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	Existing requirement - MHHS change is limited to the use of the DIP (IF020).

DNO can check MTDs via the EES. | ✓ | ✓ | ✓ | QAD question to determine whether the DNO is amending existing systems / processes.

PIT evidence demonstrating how the DNO maintains Related Metering Point data.

Where the DNO is using the DIP, the Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. |
| DNO | Change of Connection Type – limited to coordination with MEM on MTD updates | MHHS-BR-LD-047 | LDSO must receive requests from the Supplier to change the Connection Type via a bilaterally agreed communication method. | Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers. | Low | Existing provisions exist for changing Connection Type – MHHS change relates to operational choreography to ensure any associated change of market segment / change of meter is co-ordinated. | ✓ | ✓ | | QAD question to confirm that the DNO understands the link between this process and wider MEM / Registration Service activities.

QAD question requiring evidence that procedure documentation reflects the engagement with MEMs and updating SMRS within [2WDs].

No Qualification Testing required for the REC but option to place reliance on BSC testing covering the end to end change of market segment process. |
		MHHS-BR-LD-048	LDSO must liaise with the Supplier to agree and confirm a target work date.							
		MHHS-BR-LD-049	LDSO must carry out the agreed change of Connection Type site work in line with the Supplier request and on the agreed date.							
		MHHS-BR-LD-050	LDSO must notify the Supplier via a bilaterally agreed mechanism, if the Connection Type site work cannot be completed on the agreed date							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-LD-051	LDSO must notify the Registration Service via internal interface, when the Connection Type has been successfully updated. LDSO should provide the update as quickly as possible, but no later than 2 working days after completion of the work. In the case of Related MPANs the LDSO must update and notify changes for all Secondary MPANs in line with the Connection Type for the Primary MPAN. In the case of linked Import/Export MPANs, the LDSO must update and notify changes for all Export MPANs in line with the Connection Type for the linked Import MPAN.							
DNO	Commissioning – requirement on DNO to share commissioning details	MHHS-BR-LD-054	LDSO must obtain Change of Metering acceptances, following on site works by the prospective Metering Service for a Change in Market Segment, via the appropriate interface on the Data Integration Platform and maintain records accordingly.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	Existing requirement – MHHS change is limited to the new market roles for MEM DTN messages (D0383 / D0384)	✓	✓		QAD question regarding the change required to reflect the new MEM Market Roles within DTN messaging. PIT evidence demonstrating testing completed using the new DTN market roles. No Qualification Testing expected.
DNO	ISD – DNOs required to receive ISD updates	MHHS-BR-LD-059	All Parties must obtain Industry Standing Data (ISD) update notifications via the appropriate interface, and if required take necessary steps to obtain refreshed ISD data, maintain their records accordingly and reference/ utilise ISD as		Various	Low	The majority of ISD data required to support retail activities is available within the EES. Potential duplication if this functionality is being tested under the BSC.	✓	✓	✓	QAD question to determine whether the DNO is amending existing systems / processes. PIT evidence demonstrating how the DNO maintains standing data. Where the DNO is using the DIP, the Code

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
			appropriate as part of the service delivery.							Manager will require evidence of coverage of the DIP Interface within Qualification Testing.
DNO	Generic requirements associated with DIP Interfaces	MHHS-BR-LD-058	All Parties must publish data following ISO8601 format - YYYY-MM-DDTHH:MM:SS±TZH:TZM.	Various	Low	The DNO requirements reference the following DIP interfaces: - IF036 / IF037 – receipt of MEM appointment / de-appointment (expect this to be tested under the BSC in relation to Data Service Appointment). Do not see the need to test receipt of the de-appointment IF037. - IF041 – receipt of read data (expect this to tested under the BSC in relation to Data Service sharing of reads.) - IF-009 – receipt of disconnection data. Do not think there are any retail risks associated with the DNO not receiving this data as long as the registration service has the correct status - IF008 – receipt of change of energisation status. Potential flow may be tested under the BSC. - IF006 – receipt of MTDs. To be tested.	✓	✓	✓	QAD question to determine whether the DNO is utilising the DIP (NB: this is dependent on outcome of Programme query on whether DIP interfaces are mandatory for DNOs). PIT evidence demonstrating interactions using the DIP simulator. Where the DNO is using the DIP, the Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing.
		MHHS-BR-LD-059.1	All Parties must utilise Industry Standing Data to identify the relevant DIP ID/Role or DTN Market Participant ID/Role, as appropriate, to be used when communicating over the DIP/DTN.							
		MHHS-BR-LD-059.2	All Parties must derive and populate the DIP addressing (primary recipients) for all outbound interfaces in line with the rules described in the interface specification							
		MHHS-BR-LD-062	All Parties must obtain Data Integration Platform error messages in line with the End to End Solution Architecture Document, review the impacted data and re-issue corrected messages/transactions as required							
		MHHS-BR-LD-063	All Parties must return Data Integration Platform error messages in line with the End to							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
			End Solution Architecture. Unexpected and/or un-processable messages should be returned to the DIP/ originating party			- IF020 – receipt of metering point relationships (expect this to be tested under the BSC in relation to import / export associations)				
		MHHS-BR-LD-064	All Parties, when transacting via the DIP, must ensure that they implement monitoring so as to identify where expected responses are not received within standard DIP SLAs, as outlined in the Operational Choreography, so that the appropriate investigative/ resolution activity can be undertaken.			- IF018 / IF026 receipt of updates to registration data. To be tested.				
DNO	Meter Data Retriever (MDR) Appointment Update to CSS – new requirement to send MDR data and receive response as per R044	MHHS-BR-RS-078.1	Registration Service must, on notification that a Meter Data Retriever MDR appointment is ending, send an update to CSS/DCC to end date the MDR appointment using the existing Electricity Retail Data Service (ERDS) interface	Retail Risk 2: The privacy of consumer data is compromised by inappropriate use of Parties' processes and protocols	Low	New process and amended interface introduced via R0044. Inaccurate MDR data is not a retail risk but this is a key process to support settlement activities.	✓	✓		QAD question regarding implementation of the change to gain evidence from testing. PIT evidence demonstrating interactions using the CSS simulator. The Code Manager will place reliance on SIT evidence demonstrating end to end process within MPRS (the system used by the Registration Service).
		MHHS-BR-RS-078	Registration Service must, on successful completion of a Change in Meter Data Retriever (MDR), send an update to CSS/DCC of the new MDR using the existing Electricity Retail Data Service (ERDS) interface.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-RS-078.2	Registration Service must populate the ERDS interface with: 1. The four digit Market Participant Identifier derived from the DIP/DTN routing look-up list in ISD, based on the DIP ID/ DIP Role code provided in the appointment 2. The Role Code for MDR should be set to "MDR" 3. The Effective From Date of the MDR 4. The Effective To Date of the MDR (Only expected when end dating following notification of "de-appointment") 5. CSS Registration ID							
		MHHS-BR-RS-079	Registration Service must receive a response from CSS/DCC as to whether the MDR details have been updated, using the Electricity Retail Data Service (ERDS) interface. Registration Service should maintain a flag against the SDS/MDR appointment record to show the most recent CSS update outcome.							
DNO	MEM Appointment Update to CSS – existing requirement to	N/A	N/A	N/A – current process is monitored via ERDA SLA reporting, and this is	Low	Existing process. Only change is that the ERDS will need to take both Smart and Advanced MEM details and send with role code M.	✓	✓		QAD question regarding implementation of the change to gain evidence from testing. PIT evidence demonstrating interactions using the CSS simulator.

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
	send MEM data to CSS			deemed as low risk.						SIT evidence demonstrating end to end process – reliance to be places on the testing conducted by St Clements and the SIT participants.

4.1.2 SUPPLIER

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
Supplier	New connection – covering initial establishment of the metering point	MHHS-BR-SU-048.1	Supplier must request LDSO to create a new MPAN when a new Connection is required. Supplier will need to specify the anticipated: Connection Type, Energy Direction, Metered/Un-Metered Indicator & Market Segment required for the new MPAN.	Retail Risk 1: Consumer supply point interruption due to a lack of action or incorrect action by REC Parties.	Low	Existing business processes in terms of interaction with the DNO. Changes to reflect new data required in the SDEP message. This scenario has not captured the Initial Registration with CSS, agent appointment or meter installation as they are reflected below	✓	✓		QAD question regarding the changes to the existing process in particular recognition of the new data items required within a request to the DNO for a new metering point to be established (see SDEP requirements). PIT evidence demonstrating how the Supplier has tested the changes to the request for new metering points solution. No Qualification Testing expected
Supplier	Initial Registration and Switch – In addition to receiving the existing CSS flows, a Supplier will receive DIP interfaces which trigger downstream activities	MHHS-BR-SU-001	Supplier must be able to obtain registration details via the appropriate interface on the Data Integration Platform and maintain records accordingly.	Retail Risk 8: Delayed Switches provides a negative customer experience of the energy market.	Low	DIP interfaces replace existing DTN flows. Whilst the IF002 notification of a Pending Switch triggers agent appointment, the Supplier triggered the Switch request so should be expecting the DIP message. Similarly, the IF001 is received at Secured Active and should coincide with the notification from CSS.	✓	✓	✓	QAD question relating to controls in place to monitor for missing or erroneous DIP interfaces. PIT evidence demonstrating how the Supplier has tested the changes to the Switch process (including agent appointment). The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. This will be covered as part of appointment scenarios – see below.
		MHHS-BR-SU-004	Supplier must be able to obtain registration details via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-048	Supplier must be able to receive notification that initial registration is secured from CSS.							
		MHHS-BR-SU-049	Supplier must be able to obtain registration details for an Initial Registration via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
Supplier	Metering Service Appointment /	MHHS-BR-	Supplier must determine when it requires to appoint a new Metering Service as part of a	Retail Risk 1: Consumer supply point	Medium	Significant change from existing appointment process.	✓	✓	✓	QAD question(s) regarding the Supplier's implementation of the revised MEM (and Data Service for BSC) process. In particular this

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
	De-appointment NB: This includes scenarios both with and without a Switch.	SU-005	Change of Supplier, New Connection, Change of Market Segment or Change of Metering Service process.	interruption due to a lack of action or incorrect action by REC Parties. Retail Risk 8: Delayed Switches provides a negative customer experience of the energy market.		New event driven architecture and reduced settlement timetable places onus on Supplier to ensure activities are completed in a timely manner. Includes sending and receiving DIP interfaces (IF-031, IF-032. IF-035, IF-036, IF-037, IF-039) and existing process for notifying customer and PSR details. Also includes steps related to MTD receipt via the IF006 and relevant DTN flows.				should capture the distinction between new market segments and the need to appoint agents with appropriate qualification and the approach to design, build and test of the new end to end process. QAD question regarding the Supplier's controls in place to manage Supplier Agent activities to ensure the end to end process is carried out within MHHS defined timescales. QAD question regarding the changes required to reflect the new MEM Market Roles within DTN messaging. PIT evidence demonstrating Supplier's testing of the new process, including different scenarios: Switch, Change of MEM without a Switch and Initial Registration for different market segments and testing the new DTN market roles, and new DIP interfaces using the DIP Simulator. The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. End to end business process to be assured through Qualification Testing within the UIT environment, including integration with the Registration Service or an equivalent stub. This should include Switch, Change of MEM without a Switch (including change of Market Segment) and Initial Registration for individual Metering Points and those with related
		MHHS-BR-SU-006	Supplier must publish a new Metering Service appointment request using the appropriate interface on the Data Integration Platform.							
		MHHS-BR-SU-007	Supplier should check that the request is in line with the validation rules outlined in the appropriate interface specification.							
		MHHS-BR-SU-008	Supplier must obtain initial Metering Service rejected appointments from the Registration Service via the appropriate interface on the Data Integration Platform, maintain records accordingly and re-issue Metering Service appointment request as appropriate.							
		MHHS-BR-SU-009	Supplier must obtain initial Metering Service accepted appointments from the Registration Service via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-010	Supplier must obtain Registration Service Appointment Status Notification updates, with Prospective Metering Service accepted appointments, via the							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
			appropriate interface on the Data Integration Platform and maintain records accordingly.							secondary metering points or associated export.
		MHHS-BR-SU-011	Supplier must obtain Registration Service Appointment Status Notification updates, with Prospective Metering Service lapsed/rejected appointments, via the appropriate interface on the Data Integration Platform, maintain records accordingly and re-issue a new Metering Service appointment request as appropriate.							
		MHHS-BR-SU-012	Supplier must obtain Metering Service de-appointment notifications via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-013	Supplier must obtain Registration Service Notification of Service Appointment & Supporting Info via the appropriate interface on the Data Integration Platform and update registration and metering details. For the avoidance of doubt this is the message that indicates that a Metering Service appointment will/has taken effect.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-014	Supplier must receive Meter Technical Details for Advanced meters via the appropriate interface (D0268 on DTN) from Metering Service and maintain records accordingly. In the case where Related MPANs or Import/Export linked meters exist, Supplier should expect to receive Meter Technical Details for all the MPANs in the Related MPAN or Import/Export group.							
		MHHS-BR-SU-015	Supplier must receive Meter Technical Details for Traditional meters via the appropriate interfaces (D0149 and D0150 on DTN) from Metering Service and maintain records accordingly. In the case where Related MPANs or Import/Export linked meters exist, Supplier should expect to receive Meter Technical Details for all the MPANs in the Related MPAN or Import/Export group.							
		MHHS-BR-SU-016	Supplier must obtain de-appointment notifications for any Secondary Related MPANs and/or linked Export MPANs, sent from the Registration Service on the Data Integration Platform, via the appropriate interface and maintain records accordingly.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-017	Supplier must obtain appointment notifications for any Secondary Related MPANs and/or linked Export MPANs, sent from the Registration Service on the Data Integration Platform, via the appropriate interface and maintain records accordingly.							
		MHHS-BR-SU-059	Supplier must obtain Service Provider de-appointment notifications via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-106	Supplier must obtain de-appointment notifications for any Secondary Related MPANs and/or linked Export MPANs, sent from the Registration Service (following MPAN alignment monitoring) on the Data Integration Platform, via the appropriate interface and maintain records accordingly. Supplier should expect to receive automatic notification of the correct Service Provider.							
		MHHS-BR-SU-107	Supplier must obtain appointment notifications for any Secondary Related MPANs and/or linked Export MPANs, sent from the Registration Service (following MPAN alignment monitoring) on the							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
			Data Integration Platform, via the appropriate interface and maintain records accordingly.							
		MHHS-BR-SU-135	Supplier must send Notification of Customer Details to the Data Service via the appropriate interface on any change of occupancy.							
		MHHS-BR-SU-136	Supplier must send Priority Service Details to the Data Service via the appropriate interface on any update to the Priority Service Register.							
Supplier	Appointment Amendment	MHHS-BR-SU-031	Supplier must determine when it needs to vary the conditions of an existing Service Provider appointment , for example to change the contract code or change the MDR (SDS only).	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Low	Potentially not relevant to the REC. The process reflects the standard appointment process (using a different event code) so no additional testing proposed.	✓	✓		QAD question regarding the Supplier's expected use for this process to determine whether the Supplier is amending existing systems and/or processes.

Reliance then placed on testing of the appointment process scenarios including the Suppliers PIT and testing in the UIT environment for an Appointment Amendment scenario. |
| | | MHHS-BR-SU-032 | Supplier must publish a Supplier Service Appointment Request for a proposed Service Provider amendment via the appropriate interface on the Data Integration Platform | | | | | | | |

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-033	Supplier must obtain Registration Service Response to Supplier Service Appointment Requests, with rejected appointments, via the appropriate interface on the Data Integration Platform, maintain records accordingly and re-issue the Service Provider Appointment Amendment request as appropriate							
		MHHS-BR-SU-034	Supplier must obtain Registration Service Response to Supplier Service Appointment Requests, with accepted appointments, via the appropriate interface on the Data Integration Platform and maintain records accordingly							
		MHHS-BR-SU-035	Supplier must obtain Registration Service Appointment Status Notification updates, with Service Provider accepted amended appointments, via the appropriate interface on the Data Integration Platform and maintain records accordingly. This confirms that the Service Provider amendment has been successfully completed.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-036	Supplier must obtain Registration Service Appointment Status Notification updates, with Service Provider rejected amended appointments, via the appropriate interface on the Data Integration Platform, maintain records accordingly and re-issue a new Service Provider appointment amendment request as appropriate.							
Supplier	Missing or Disputed Switch Meter Reads	MHHS-BR-SU-158	Supplier must, where there is a missing transfer read or there is an issue with a transfer read received, provide a suggested transfer read to the other Supplier via the appropriate interface	Retail Risk 5: Consumers do not receive an accurate first and final bill, which leads to high customer dissatisfaction.	Low	Limited change to the existing Disputed / Missing Read process (main change is associated with the triggers rather than the business process).

NB: the steps relating to the Supplier notifying the Data Service of the agreed read have not been includes (SU-161 and SU-162) as these should be reflected within BSC elements of testing. | ✓ | ✓ | | QAD question regarding the change required to reflect the amended Switch Meter Read exceptions process, specifically recognising the amendments to the triggers for raising a dispute, the extension of the application to cover half hourly metering points and the differing approach for different market segments.

PIT evidence demonstrating how the Supplier has tested the revised process, including amended D0300 market message.

No Qualification Testing expected. |
		MHHS-BR-SU-159	Supplier must receive proposed transfer reads via the appropriate interface and validate that the read is acceptable							
		MHHS-BR-SU-160	Supplier must provide a response to the proposed read request via the appropriate interface							
Supplier	Meter Works – covering standard requests for the MEM to carry out	MHHS-BR-SU-050	Supplier must, where appropriate, following appointment of the relevant Metering Service, request a new meter is installed in line with the Change of Metering process.	Retail Risk 1: Consumer supply point interruption due to a lack of action or	Low	Existing approach to requesting change (D0142, D0001), managing issues where activity has failed to complete (D0002, D0221) and receiving MTDs (D0149 / 150 and D0268) – MHHS change is limited	✓	✓	✓	QAD question regarding the end to end meter works process – whilst most elements of this process are existing functionality, ensuring the Supplier understands the changes to the existing process is important.

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
	metering activities	MHHS-BR-SU-052	Supplier must, where required, request that any existing metering equipment is removed in line with the Change of Metering process.	incorrect action by REC Parties. Retail Risk 13: Retail consumers have a negative customer experience as part of the metering works conducted.		to the new market roles for MEM DTN messages. New DIP interface for receipt of MTDs via the Registration Service (IF006) and receipt of associated cumulative meter reads (IF041). NB: Existing step to configure a smart device in accordance with the SEC (SU-074 has not been included.)				QAD question regarding the change required to reflect the new MEM Market Roles within DTN messaging. PIT evidence demonstrating testing completed using the new DTN market roles and the new DIP interfaces using the DIP simulator. The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing.
		MHHS-BR-SU-066	Supplier must be able to send a request to fit, exchange or remove a meter via the appropriate interface							
		MHHS-BR-SU-067	Supplier must be able to receive Fault Resolution Report or Request for decision on Further action via the appropriate interface							
		MHHS-BR-SU-068	Supplier must be able to receive Notification of Failure to Install or Energise Metering System via the appropriate interface							
		MHHS-BR-SU-069	Supplier must be able to obtain and process metering change acceptances received from the Registration Service via the appropriate interface on the Data Integration Platform							
		MHHS-BR-SU-070	Supplier must be able to receive Meter Technical Details and register meter reads for Advanced/Traditional meters via the appropriate interfaces							
		MHHS-BR-SU-071	Supplier should reconcile the metering details received from Registration Service with information from the Metering Service and investigate any discrepancies if required.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-072	Supplier must be able to obtain and process metering change cumulative reads received via the appropriate interface on the Data Integration Platform							
		MHHS-BR-SU-073	Supplier must be able to install and commission a Smart meter in line with the Smart Energy Code							
		MHHS-BR-SU-132	Supplier must notify faulty equipment it identifies to the ADS and receive updates via the appropriate interfaces as outlined in the relevant BSCP.							
		MHHS-BR-SU-133	Supplier must receive notification of any faulty equipment from the SDS via a D0001 or bilaterally agreed interface as outlined in the relevant BSCP. For Smart and Traditional meters the Supplier will take the lead investigating faults. The Supplier will be responsible for notifying the Data Service if they require data to be resubmitted as a result of a fault.							
Supplier	Disconnection – steps within BP007 cut across a number of scenarios including meter	MHHS-BR-SU-051	Supplier must identify that a disconnection is required, following existing internal processes.	Retail Risk 5: Consumers do not receive an accurate first and final bill, which leads to high customer dissatisfaction.	Low	No change to existing interactions with the DNO – note that these are captured in the DCUSA and the BSC. Receipt of the IF009 (SU-056) is the only new element within this scenario.	✓	✓	✓	QAD question regarding the end to end disconnection process – whilst most elements of this process are existing functionality, ensuring the supplier understands how these come together into a single business process is key. PIT evidence demonstrating the end to end
		MHHS-BR-SU-054	Supplier must be able to request the LDSO to disconnect a Meter Point via the appropriate interface							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
	works and appointments	MHHS-BR-SU-055	Supplier must be able to receive a rejection to the disconnection request from the LDSO via the appropriate interface and action, as appropriate, based on the rejection reason.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.		NB: Existing steps to deactivate the CSS registration are not included (SU-057.1, SU-058) and requirements relating to meter removal (SU-052), de-energisation (SU-053) and agent appointment (SU-059) are covered elsewhere.				process has been tested using DIP simulator. The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing.
		MHHS-BR-SU-056	Supplier must be able to receive confirmation of disconnection of an MPAN via the appropriate interface and maintain records accordingly.							
Supplier	Change of Energisation Status	MHHS-BR-SU-053	Supplier must, before disconnection, ensure that the Meter Point is de-energised.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers. Retail Risk 8: Delayed Switches provides a negative customer experience of the energy market.	Low	Existing requirement regarding request for energisation status change – MHHS change is limited to the new market roles for MEM DTN messages (D0134 / D0179 D0010). Receipt of the IF007 (SU-061), IF008 (SU-064) IF041 (SU-063) are the only new elements within this scenario.	✓	✓	✓	QAD question regarding the end to end change of energisation process – whilst most elements of this process are existing functionality, ensuring the supplier understands how these come together into a single business process is key. QAD question regarding the change required to reflect the new MEM Market Roles within DTN messaging. PIT evidence demonstrating testing completed using the new DTN market roles and new DIP interfaces using the DIP simulator. The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing.
		MHHS-BR-SU-060	Supplier must, on identifying a need to change energisation status for an MPAN, request the Meter Service or LDSO (as appropriate) to change the energisation status via the appropriate interface.							
		MHHS-BR-SU-061	Supplier must obtain notifications of a rejection or unable to action a Change of Energisation request via the appropriate interface on the Data Integration Platform and action, as appropriate, based on the rejection reason.							
		MHHS-BR-SU-062	Supplier must, for traditional pre payment meters, receive a D0179 from the Metering Service with the pre-payment change in energisation details.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-063	Supplier must obtain Advanced and Smart cumulative reads for the energisation change, sent by the Metering Service on the Data Integration Platform, via the appropriate interface.							
		MHHS-BR-SU-064	Supplier must obtain accepted Change of Energisation status notifications from the Registration Service via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-065	Supplier must receive register reads, for non-Smart meters, for the energisation change via the appropriate interface.							
Supplier	Maintenance of Supplier Owned Registration Data	MHHS-BR-SU-076	Supplier must send Central Switching Service updates on domestic premise indicator via the appropriate interface.	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers. Retail Risk 10: Inaccurate data or data	Medium	A summary of each data item is set out below: - Domestic Premises Indicator: No change to approach for updating DPI via the CSS. The Supplier will receive update via IF018. - Consent Granularity: governed under the BSC. - Related MPAN: see below.	✓	✓	✓	QAD question regarding maintenance of Supplier owned data – noting that a change to the notification process is only required for IHD, SMSO and Profile Class /SSC updates. PIT evidence demonstrating testing completed using the DIP simulator. The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. This will include IHD, SMSO and Profile Class / SSC updates.
		MHHS-BR-SU-077	Supplier must obtain domestic premise indicator updates via the appropriate interface on the Data Integration Platform and maintain records accordingly. Supplier should consider if there is any impact on the Consent Granularity Indicator.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-078	Supplier must be able to publish Consent Granularity Indicator updates on the Data Integration Platform via the appropriate interface, following customer notification of a change in consent, review following domestic premise indicator update or installation of a new Smart meter.	that is not maintained appropriately leads to delay in the switching process.		- Import / Export association: governed under the BSC. - IHD details: new requirement for supplier to provide IHD details (IF025) and receive updates via IF026. - SMSO details: new requirement for supplier to provide SMSO details (IF025) and receive updates via IF026. - Profile Class / SSC details -new requirement for supplier to provide Profile Class / SSC details (IF025) and receive updates via IF026.				
		MHHS-BR-SU-079	Supplier must obtain Consent Granularity Indicator updates via the appropriate interface on the Data Integration Platform and action as appropriate.							
		MHHS-BR-SU-090	Supplier must, where changes to In-House Display (IHD) details are identified, publish an IHD update to Registration Service via the appropriate interface on the Data Integration Platform.							
		MHHS-BR-SU-091	Supplier must obtain IHD updates from Registration Service via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-092	Supplier must, where changes to Smart Metering System Operator (SMSO) are identified, publish an SMSO update to Registration Service via the appropriate interface on the Data Integration Platform.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-093	Supplier must obtain SMSO updates from Registration Service via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-094	Supplier must, where changes to Import/Export linkages are required, publish an Import/ Export linkage update to Registration Service via the appropriate interface on the Data Integration Platform.							
		MHHS-BR-SU-096.1	Supplier must, where changes to legacy data items (Profile Class/SSC) are identified, publish a legacy data update to Registration Service via the appropriate interface on the Data Integration Platform.							
		MHHS-BR-SU-096.2	Supplier must obtain legacy data item (Profile Class/SSC) updates from Registration Service via the appropriate interface on the Data Integration Platform and maintain records accordingly.							
		MHHS-BR-SU-096.3	Supplier must be able to obtain DCC enrolment updates via the appropriate interface on the Data Integration Platform and maintain records accordingly.							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
Supplier	Maintenance of Non Supplier Owned Registration Data	MHHS-BR-SU-075	Supplier must obtain MPL address/ GSP Group ID updates via the appropriate interface on the Data Integration Platform and maintain records accordingly. Supplier should consider if there are any impacts on Service Provider appointments.	Retail Risk 6: Inaccurate Address Management data results in errors that impact customers.	Low	A summary of each data item is set out below:

- MPL Address: No change to approach for updating MPL address. Supplier to receive update via IF018.

- DUoS Tariff Id: Not relevant to REC.

- Energy Direction: No change to approach for updating Energy Direction. Supplier to receive update via IF018.

- Metered Status: No change to approach for updating Metered Status. Supplier to receive update via IF018.

- Customer Direct Contract: New data maintained by the Data Service / Metering Service. Supplier involvement limited to receipt of IF-039. | ✓ | ✓ | ✓ | QAD question regarding maintenance of Non Supplier owned data – noting that the only design change is receipt of data via a DIP interface.

PIT evidence demonstrating testing completed using the DIP simulator.

The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. |
		MHHS-BR-SU-075.1	Supplier must notify the LDSO of any changes to MPL address that it becomes aware of (outside of the PUB-018 notification) via email/ SDEP or other bilaterally agreed mechanism	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.						
		MHHS-BR-SU-080	Supplier must be able to obtain DUoS Tariff ID updates via the appropriate interface on the Data Integration Platform							
		MHHS-BR-SU-075	Supplier must obtain MPL address/ GSP Group ID updates via the appropriate interface on the Data Integration Platform and maintain records accordingly. Supplier should consider if there are any impacts on Service Provider appointments.	Retail Risk 10: Inaccurate data or data that is not maintained appropriately leads to delay in the switching process.						
		MHHS-BR-SU-084	Supplier must, where required, request the LDSO to carry out the one time update to the Energy direction via a bilaterally agreed mechanism (eg SDEP or email)							
		MHHS-BR-	Supplier must manage any rejections to the Energy Direction							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		SU-085	update and re-submit as appropriate							
		MHHS-BR-SU-086	Supplier must be able to obtain Energy Direction updates via the appropriate interface on the Data Integration Platform and maintain records accordingly							
		MHHS-BR-SU-087	Supplier must, where required, request the LDSO to carry out the one time update to the Metered Status via a bilaterally agreed mechanism (eg SDEP or email)							
		MHHS-BR-SU-088	Supplier must manage any rejections to the Metered Status update and re-submit as appropriate							
		MHHS-BR-SU-089	Supplier must be able to obtain Metered Status updates via the appropriate interface on the Data Integration Platform and maintain records accordingly							
		MHHS-BR-SU-096.3	Supplier must be able to obtain DCC enrolment updates via the appropriate interface on the Data Integration Platform and maintain records accordingly							
		MHHS-BR-SU-018	Supplier must obtain Customer Direct Contract response via the appropriate interface on the Data Integration Platform and maintain records accordingly. Supplier should utilise this information in future requests for Metering							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
			Service appointments for the notified MPANs.							
Supplier	Maintenance of Related Metering Point data	MHHS-BR-SU-081	Supplier must notify Registration Service of any change required to the Metering Point Relationships using the appropriate interface on the Data Integration Platform	Retail Risk 7: Inaccurate meter point master data results in errors that impact consumers.	Medium	New end to end process for managing Related Metering point relationship including IF019 to notify the Registration Service about creation of, changes to or ending relationship and IF020 to receive notifications from the Registration Service.

NB: MHHS is introducing greater reliance on related metering point relationships for agent appointments so ensuring this works and suppliers have appropriate systems and process in place for maintaining this data is key. However, the application of this process is infrequent. | ✓ | ✓ | ✓ | QAD question regarding maintenance of Related Metering Point data and seeking assurance that the Supplier understands the changes to the use of this data being introduced with MHHS e.g. auto appointment / de-appointment of agents.

PIT evidence demonstrating testing completed using the DIP simulator.

The Code Manager will require evidence of the DIP Connectivity Testing conducted with the DIP Manager as a part of the QAD.

Related Metering Point updates to be assured through Qualification Testing within the UIT environment, including integration with the Registration Service or an equivalent stub. |
| | | MHHS-BR-SU-083 | Supplier must be able to obtain Related MPAN updates via the appropriate interface on the Data Integration Platform and maintain records accordingly | | | | | | | |
| | | MHHS-BR-SU-131 | All Parties, where required, must be able to identify (using the appropriate interface) and appropriately manage related MPANs as described in the Retail Energy Code. | | | | | | | |
| Supplier | Change of Market Segment | MHHS-BR-SU-097 | Supplier must identify when a Change of Connection Type or Market Segment is required following a customer request for change to the connection/metering. The Supplier must liaise with the customer, LDSO and Metering Service as appropriate to coordinate the change and agree a target work date. | Retail Risk 1: Consumer supply point interruption due to a lack of action or incorrect action by REC Parties.

Retail Risk 13: | Low | No change to existing interactions with the DNO regarding change to connection type. NB: these are captured in the DCUSA and the BSC.

Also existing approach to requesting meter exchange with MEM (noting the change to DTN flows to reflect new market roles). | ✓ | ✓ | ✓ | QAD question regarding the end to end change of market segment process. Whilst most elements of this process are existing functionality, ensuring the Supplier understands how these come together into a single business process is key.

QAD should be seeking assurance that the Supplier understands the relevance of this process to wider aspects of the business e.g. appointment / de-appointment of agents. |

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-098	Supplier must send a request to the LDSO to change the Connection Type via a bilaterally agreed communication method, where it is identified that a Change of Connection Type is required.	Retail consumers have a negative customer experience as part of the metering works conducted.		Receipt of the IF043 for change of connection type and IF044 for change of market segment are is the only new elements within this scenario. Whilst a number of process steps are governed under the DCUSA / BSC, the impact on agent appointment and metering updates means this is an area REC Qualification requirements should cover.				PIT evidence demonstrating the end to end process has been tested using DIP simulator. The Code Manager will require evidence of coverage of the DIP Interface within Qualification Testing. This will be covered as part of appointment scenarios – see above.
		MHHS-BR-SU-099	Supplier must send a request to the Proposed Metering Service to change the Metering via a bilaterally agreed communication method, where it is identified that a Change of Market Segment is required.							
		MHHS-BR-SU-100	Supplier must receive confirmation from the LDSO of the agreed target work date for any Change to Connection Type requests via a bilaterally agreed communication method.							
		MHHS-BR-SU-101	Supplier must receive confirmation from the Proposed Metering Service of the agreed target work date for any Change to Market Segment requests via a bilaterally agreed communication method.							
		MHHS-BR-SU-102	Supplier must, where it identifies that new Service Providers are needed, trigger Service Appointments using the Change of Metering Service and Change of Data Service processes, with a scenario of "SEG".							

Market Role	Area	MHHS Requirements		Retails Risks	Risk Rating for MHHS Qualification	Rationale of Risk Rating	Proposed Qualification Approach			
							QAD Question	PIT evidence	SIT / Qualification Test Scenario	Further comments on coverage during Qualification
		MHHS-BR-SU-103	Supplier must work closely with all parties involved to ensure that the Target Date will be achieved. If Supplier is informed that the date has had to be moved Supplier should re-submit any Service Appointments for the new Target Date							
		MHHS-BR-SU-104	Supplier must obtain Connection Type updates from the Registration Service via the appropriate interface on the Data Integration Platform and maintain records accordingly. Supplier should monitor for these updates after the agreed target work date and liaise with LDSO to ensure a prompt update.							
		MHHS-BR-SU-105	Supplier must obtain Market Segment updates from the Registration Service via the appropriate interface on the Data Integration Platform and maintain records accordingly. Supplier should monitor for these updates after the agreed target work date and liaise with Metering Service/LDSO, as appropriate, to ensure a prompt update.

			resolution activity can be undertaken.							
		MHHS-BR-MS-075	All services must have familiarity with and actively monitor any Data Integration Platform tools for tracking flows, as outlined in the End to End Solution Architecture, so that the necessary investigative action can be taken when required.							
		MHHS-BR-MS-083	All Services should implement data validation steps and techniques that they feel are appropriate to ensure the most accurate and efficient delivery of the service.							
		MHHS-BR-MS-091	All Services must maintain and update their records with any data received on interfaces to ensure the most accurate and efficient delivery of the service.							

4.2 MIGRATION REQUIREMENTS

The following assessment criteria to cover MHHS-DEL974 MHHS Migration Design Requirements Log v1.0 by role has been developed by the REC Code Manager and presented to REC PAB for approval on 26 March 2024. This may be updated as further information is published by the MHHS Programme.

4.2.1   DNO (INCLUDING REGISTRATION SERVICE)

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
DNO (including Registration Service)	Forward Migration	Change of Supply	MHHS-Migration-CoS-RS-001	In the scenario that a Legacy MPAN is switching to a MHHS Qualified Supplier, the Registration Service will send both the IF-002 and the D0217 / D0260 to the incoming Supplier at the same time.		✓	✓	Migration design covered through SIT.
DNO (including Registration Service)	Forward Migration	Change of Supply	MHHS-Migration-CoS-RS-002	Each time a Pending registration is received, Registration Service to consult ISD to determine Qualification status of Supplier in respect to the status of the MPAN.	✓	✓		Migration design covered through SIT.
DNO (including Registration Service)	Forward Migration	Change of Supply	MHHS-Migration-CoS-RS-003	Registration Service to send the D0217/D0260 the next working day at the very latest after the IF-002 (although in most cases the messages will be sent only a few hours apart).	✓	✓		Migration design covered through SIT.
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-001	Registration Service must send a D0170 to the outgoing MOP to request they send the MTDs to the new MS. This D0170 will include a specific enumeration value within the data item 'Requested Action Code' which will specify whether a CoA or CoS Migration is occurring.	✓	✓		Migration design covered through SIT.
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-002	In the scenario that a Migration is already underway and a Pending switch is received, when the D-1 effective from status of the Agent appointment is reached, Registration Service must send IF-035 in place of an IF-036 with specific Migration cancellation value within the 'Event Code' data item to inform incoming Service Providers and incumbent Supplier that the Migration has been cancelled.	✓	✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-004	Related MPANs: Following receipt of a PUB-031, the Registration Service must reject any requested change to the Related status of an MPAN.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-005	Related MPANs: The Registration Service must automatically migrate Secondary MPANs alongside Primary MPANs.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-007	Once the Registration Service receives an IF-031, subsequent D0205's should be rejected.		✓		Migration design covered through SIT.

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-008	Registration Service to remove MPAN from inclusion in the Legacy EES Extract upon successful completion of Forward Migration, indicated through the send of an IF-036.	✓	✓		Migration design covered through SIT.
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-009	If MPAN is Legacy and an IF-031 is sent using a non-Migration appointment code in the 'Service Provider Appointment Scenario' data item, this will be rejected using REG1094 validation rule.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-010	If an IF-031 is rejected due to MPAN being Legacy and the IF-031 is sent using a non-Migration appointment code in the 'Service Provider Appointment Scenario' data item, an IF-032 will be sent back with specific Response Code and Response Message.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-011	Related MPANs: If MPAN is a Secondary MPAN and an IF-031 is sent using a Migration appointment code in the 'Service Provider Appointment Scenario' data item, the IF-031 will be rejected using REG1039 validation rule.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-012	If an IF-031 is rejected due to MPAN being a Secondary MPAN and the IF-031 is sent using a Migration appointment code in the 'Service Provider Appointment Scenario' data item, an IF-032 will be sent back with specific Response Code and Response Message.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-013	In the scenario that a Pending switch is already in place and a Migration is initiated, Registration Service must reject the IF-031 using REG1095 validation rule.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-014	If an IF-031 is rejected due to Pending switch already being in place, an IF-032 will be sent back with specific Response Code and Response Message.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-016	Registration Service will not automatically migrate Export MPAN following successfully Migration of the Import MPAN; they will be migrated independently of one another.	✓	✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-017	Registration Service to automatically appoint same MS and DS to Related MPANs post-Forward Migration.		✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-018	Registration Service to send the IF-036 at the Service Appointment effective from date.		✓	✓	

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-RS-019	Once a Forward Migration is initiated (indicated through the send of an IF-031) or if a MPAN is MHHS, the Registration Service will not accept Legacy D flows for a given MPAN.	✓	✓	✓	
DNO (including Registration Service)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-LDSO-001	LDSO to receive PUB-036 from Registration Service (via the DIP), containing MS appointment notification and MTD.		✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-RS-001	In the scenario that a MHHS MPAN is switching to a Legacy Supplier, the Registration Service will only send the D0217 / D0260 to the incoming Supplier. No IF-002 will be sent.		✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-RS-002	Related MPANs: The Registration Service will automatically initiate a Reverse Migration for all Secondary MPANs following receipt of a Pending Registration for a Secondary MPAN.		✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-RS-003	Each time a Pending registration is received, Registration Service to consult ISD to determine qualification status of Supplier in respect to the status of the MPAN.	✓	✓		
DNO (including Registration Service)	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-RS-004	If a Pending registration prompts a Reverse Migration and the MPAN did not previously exist in Legacy arrangements, MPRS to populate default Legacy data.	✓	✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-RS-005	If a Pending registration prompts a Reverse Migration and the MPAN previously existed in Legacy arrangements, MPRS to populate data items from the previous Legacy Registration.	✓	✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-RS-008	Once a Reverse Migration is initiated (indicated through the receipt of a Pending Registration) or if a MPAN is Legacy, the Registration Service will not accept DIP flows for a given MPAN.	✓	✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-RS-001	In the case of Smart Meters only, Registration Service to include new Supplier details as part of IF-003 which is sent to outgoing MS (via the DIP).	✓	✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-RS-003	Although the Registration Service can process multiple D0205's, it will only use information from the last accepted D0205 before Secured Active processing at 1800 hours to generate an IF-003 at Secured Active acceptance.	✓	✓		Migration design covered through SIT.
DNO (including Registration Service)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-RS-004	D0205 batch processing to occur within the Registration Service on a frequent basis with batch processing running every 2 hours or more frequently, in the majority of cases.	✓	✓		

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
DNO (including Registration Service)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-RS-005	Registration Service to include identity of MOP in IF-003 if this data was provided in the D0205.	✓	✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-RS-007	As soon as an IF-003 is sent, marking the completion of a Reverse Migration, Registration Service to add MPAN back into the Legacy EES Extract.	✓	✓		Migration design covered through SIT.
DNO (including Registration Service)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-LDSO-001	LDSO to receive PUB-003 from Registration Service (via the DIP), informing of MS de-appointment notification.		✓	✓	
DNO (including Registration Service)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-LDSO-002	The receipt of a PUB-003 will serve as the definitive statement to each service that a Reverse Migration has occurred.	✓			
DNO (including Registration Service)	Cancellation of Migration	Change of Agent	MHHS-Migration-Can-RS-001	Registration Service cancels a CoA Migration and follows the BAU lapsed appointment process, issuing an IF-035.	✓	✓	✓	
DNO (including Registration Service)	Cancellation of Migration	Change of Agent	MHHS-Migration-Can-RS-002	Registration Service cancels a CoA Migration and sends a D0209.	✓	✓	✓	
DNO (including Registration Service)	Cancellation of Migration	Change of Supply	MHHS-Migration-Can-RS-003	A Migration CoS is cancelled and the Registration Service follows the BAU lapsed appointment process, issuing an IF-035.	✓	✓	✓	
DNO (including Registration Service)	Cancellation of Migration	Change of Supply or Change of Agent	MHHS-Migration-Can-RS-005	If subsequent IF-031's are received before the initial Migration completes, the original IF-031 should be lapsed and the IF-031 with the most recent timestamp should be used instead.	✓	✓	✓	
DNO (including Registration Service)	Cancellation of Migration	Change of Supply or Change of Agent	MHHS-Migration-Can-RS-006	If MPAN state changes to terminated, an IF-035 would be sent which would cancel the Migration.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-002	Registration Service will need to check for incomplete Migrations and issue an IF-045 where a Supplier has only migrated either the MS or DS, to inform the Supplier that their Migration is incomplete.	✓	✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-003	If a Forward Migration is underway or MPAN is already MHHS and a D0205 is sent, this will be rejected. A D0203 will be sent back with enumeration value 62 in the 'Rejection Reason Code' data item to specify the rejection reason.		✓	✓	

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-004	If a Forward Migration is underway or MPAN is already MHHS and a D0205 is sent, this will be rejected. A D0203 will be sent back with enumeration value 62 in the 'Rejection Reason Code' data item to specify the rejection reason.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-005	If a Forward Migration is underway or MPAN is already MHHS and a D0304 is sent, this will be rejected. A D0304 will be sent back with enumeration value Q in the 'MPAS D0304 Response Code' data item to specify the rejection reason.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-006	If a Forward Migration is underway or MPAN is already MHHS and a D0312 is sent, this will be rejected. A D0312 will be sent back with enumeration value AD in the 'MOP Flow Response Code' data item to specify the rejection reason.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-007	If a Forward Migration is underway or MPAN is already MHHS and a D0386 is sent, this will be rejected. A D0386 will be sent back with enumeration value Y in the 'Related MPAN Response Code' data item to specify the rejection reason.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-008	If a Reverse Migration is underway or MPAN is Legacy and an IF-005 is sent, this will be rejected using REG1029 validation rule.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-009	If an IF-005 is rejected due to MPAN either undergoing Reverse Migration or being Legacy, an IF-006 will be sent back with specific Response Code and Response Message.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-010	If a Reverse Migration is underway or MPAN is Legacy and an IF-019 is sent, this will be rejected using REG1066 validation rule.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-011	If an IF-019 is rejected due to MPAN either undergoing Reverse Migration or being Legacy, an IF-020 will be sent back with specific Response Code and Response Message.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-012	If a Reverse Migration is underway or MPAN is Legacy and an IF-025 is sent, this will be rejected using REG1046 validation rule.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-013	If an IF-025 is rejected due to MPAN either undergoing Reverse Migration or being Legacy, an IF-026 will be sent back with specific Response Code and Response Message.		✓	✓	

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-014	If a Reverse Migration is underway or MPAN is Legacy and an IF-038 is sent, this will be rejected using REG1075 validation rule.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-015	If an IF-038 is rejected due to MPAN either undergoing Reverse Migration or being Legacy, an IF-039 will be sent back with specific Response Code and Response Message.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-016	If a Reverse Migration is underway or MPAN is Legacy and an IF-040 is sent, this will be rejected using Level 4 validation rule RCP1076.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-017	If a Forward Migration is underway and an IF-019 is sent, this will be rejected using REG1067 validation rule.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-018	If an IF-019 is rejected due to MPAN undergoing Forward Migration, an IF-020 will be sent back with specific Response Code and Response Message.		✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-019	Reverse Migration: Registration Service to adhere to the SLAs specified within the MHHS BAU Design as part of the various read/MTD sharing processes, unless explicitly called out.		✓		
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-020	When sending and processing DIP messages, Registration Service to adhere to the BAU MHHS Design SLAs, which will apply unchanged throughout the Migration period.		✓		
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-021	Registration Service to send all Legacy Data Flows via the DTN or via other agreed means.		✓		
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-RS-022	Registration Service to auto-align Import / Export MPANs which have been fully migrated but appointed to different Agents.	✓	✓	✓	
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-LDSO-001	When sending and processing DIP messages, LDSOs to adhere to the BAU MHHS Design SLAs, which will apply unchanged throughout the Migration period.		✓		
DNO (including Registration Service)	Miscellaneous	Change of Supply or Change of Agent	MHHS-Migration-Mis-LDSO-002	LDSOs to send all Legacy Data Flows via the DTN or via other agreed means.		✓		

4.2.2 SUPPLIER

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
Supplier	Forward Migration	Change of Supply	MHHS-Migration-CoS-SUP-001	If the Supplier is Qualified and they inherit a MHHS MPAN, under no circumstances can the MPAN be reverted to Legacy as part of this particular switch. Reverse Migration is not permitted.	✓			
Supplier	Forward Migration	Change of Supply	MHHS-Migration-CoS-SUP-002	If MPAN is Legacy and the incoming Supplier is MHHS Qualified, the incoming Supplier will make a decision whether to migrate MPAN or continue operating under Legacy arrangements.	✓			
Supplier	Forward Migration	Change of Supply	MHHS-Migration-CoS-SUP-003	Supplier to check whether MPAN is MHHS or Legacy within EES.	✓			Migration design covered through SIT.
Supplier	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-SUP-001	Supplier to send IF-031 to Registration Service and include Migration-specific codes within the 'Service Provider Appointment Scenario' data item to make explicit the intent to migrate the MPAN.		✓	✓	
Supplier	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-SUP-002	In the case of CoA only, incumbent Supplier to send a D0151 to outgoing Meter Operator with specific value in 'Termination Reason' (J0279) data item.		✓		
Supplier	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-SUP-003	In the case of CoS only, outgoing Supplier to send a D0151 to the outgoing Meter Operator with specific value in 'Termination Reason' (J0279) data item.		✓		
Supplier	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-SUP-004	Suppliers, as standard business process, should ensure the effective from date for CoA appointments is at least 1 day in the future from the transmission date of the IF-031.	✓			
Supplier	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-SUP-005	Suppliers to ensure they do not have open IF-031's which are left unresponded to by Agents beyond appointment effective from dates. Suppliers to chase Agents to respond with an IF-034 with an Accept or Reject in this case.	✓			
Supplier	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-SUP-006	For Traditional and HH Advanced CoS only, the D0151 that is sent from outgoing Supplier to outgoing MOP must have data item 'New Supplier ID' (J1194) populated.		✓		
Supplier	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-SUP-007	Supplier should send the D0151 using Legacy SLAs.		✓		
Supplier	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-SUP-001	If the Supplier is Qualified and they inherit a MHHS MPAN, under no circumstances can the MPAN be reverted to Legacy as part of this particular switch. Reverse Migration is not permitted.	✓			
Supplier	Reverse Migration	Change of Supply	MHHS-RMigration-CoS-SUP-002	Supplier to check whether MPAN is MHHS or Legacy within EES.	✓			Migration design covered through SIT.

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
Supplier	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-SUP-001	New Supplier to appoint Legacy Agent by sending a D0155 to the new MOP. Will add an additional Group 318 to indicate a Reverse Migration is occurring.		✓	✓	
Supplier	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-SUP-002	New Supplier to send D0205 to the Registration Service before Secured Active sync is received from CSS.		✓		Migration design covered through SIT.
Supplier	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-SUP-003	The receipt of a PUB-003 will serve as the definitive statement to each service that a Reverse Migration has occurred.	✓			
Supplier	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-SUP-004	In the case that a D0205 is not sent to the Registration Service before the IF-003 is issued and MTDs must be transferred manually, Supplier to request their MOP manually provides the details of the incoming MOP and DC to the outgoing MS.	✓			
Supplier	Cancellation of Migration	Change of Agent	MHHS-Migration-Can-SUP-001	Supplier to send a D0151 with the switch date and specific enumerated value in Termination Reason (J0279) data item to existing MOP and DC.		✓		
Supplier	Cancellation of Migration	Change of Supply	MHHS-Migration-Can-SUP-002	The Supplier needs to be able to follow the standard process for informing their existing Agents that their appointment is still in place.	✓	✓		
Supplier	Miscellaneous	Change of Supply and Change of Agent	MHHS-Migration-Mis-SUP-001	Suppliers will not be able to change Market Segment as part of a Migration. They must set Services that match the current Market Segment.	✓	✓	✓	
Supplier	Miscellaneous	All	MHHS-Migration-Mis-SUP-002	All Suppliers will need to have made changes to their services and business processes by M11 to support the Migration of MPANs away from their portfolios when a Migration CoS occurs.	✓			Covered by the Pre-Qualification Submission for Non-SIT Participants.
Supplier	Miscellaneous	All	MHHS-Migration-Mis-SUP-003	All Suppliers wishing to operate the Reverse Migration process (to Switch consumers whose MPAN is under the MHHS arrangements) must have made changes to their services and business processes by M11.	✓			Covered by the Pre-Qualification Submission for Non-SIT Participants.
Supplier	Miscellaneous	Change of Supply	MHHS-Migration-Mis-SUP-004	Reverse Migration: Suppliers to adhere to the SLAs specified within the MHHS BAU Design as part of the various read/MTD sharing processes, unless explicitly called out.		✓		
Supplier	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-SUP-005	When sending and processing DIP messages, Suppliers to adhere to the BAU MHHS Design SLAs, which will apply unchanged throughout the Migration period.		✓		

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
Supplier	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-SUP-006	Suppliers to send all Legacy Data Flows via the DTN or via other agreed means.		✓		

4.2.3   MEM

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
MEM (Legacy)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-MOP-001	When outgoing MOP receives the D0170 from the Registration Service and the enumerated values within the 'Requested Action Code' data item indicate that either a Migration CoA or CoS is occurring, the MOP must operate specific Forward Migration processes which differs from Legacy processes.		✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-MOP-002	When no meter is installed, no MTDs should be sent.	✓	✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-MOP-003	Advanced only: Outgoing MOP to convert current MTDs, stored in a D0150 format, into a D0268.		✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-MOP-004	In the case of NHH Advanced meters, outgoing MOP will need to convert D0149/D0150 and D0313 into D0268 format.	✓	✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-MOP-005	In the case of NHH Advanced meters, MOP may be required to undertake re-programming of the meter.	✓			Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Forward Migration	Change of Agent	MHHS-Migration-CoA(MS)-MOP-006	The MPID assigned to the MOP needs to refer to the MS and the MTDs should be sent to role code MS over the DTN.	✓	✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-MOP-001	New MOP to issue MTDs to incoming DC and incoming Supplier within 5 working days.	✓	✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-MOP-002	New MOP to operate Reverse Migration processes instead of Legacy processes when receiving D0155 with specific Group 318 values.	✓	✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-MOP-003	If Supplier requests their MOP manually provide details of incoming MOP and DC to the outgoing MS, MOP to fulfil this request within 2 working days.	✓	✓		Not required for new organisations entering the market as MHHS MEM only.

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
MEM (Legacy)	Cancellation of Migration	Change of Agent	MHHS-Migration-Can-MOP-001	The existing MOP will receive a D0155 from the incumbent Supplier when a Forward Migration CoA or CoS is cancelled.		✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Miscellaneous	All	MHHS-Migration-Mis-MOP-001	All Agents will need to have made changes to their services and business processes by M11 to support the Migration of MPANs away from their portfolios when a Migration CoS occurs.	✓			Not required for new organisations entering the market as MHHS MEM only. Covered by the Pre-Qualification Submission for Non-SIT Participants.
MEM (Legacy)	Miscellaneous	All	MHHS-Migration-Mis-MOP-002	All Agents wishing to operate the Reverse Migration process (to Switch consumers whose MPAN is under the MHHS arrangements) must have made changes to their services and business processes by M11.	✓			Not required for new organisations entering the market as MHHS MEM only. Covered by the Pre-Qualification Submission for Non-SIT Participants.
MEM (Legacy)	Miscellaneous	Change of Supply	MHHS-Migration-Mis-MOP-003	Reverse Migration: MOPs to adhere to the SLAs specified within the MHHS BAU Design as part of the various MTD sharing processes, unless explicitly called out.		✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-MOP-004	When sending and processing DIP messages, MOPs to adhere to the BAU MHHS Design SLAs, which will apply unchanged throughout the Migration period.		✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-MOP-005	MOPs to send all Legacy Data Flows via the DTN or via other agreed means.		✓		Not required for new organisations entering the market as MHHS MEM only.
MEM (Legacy)	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-MOP-006	If MTDs change after these have already been sent by the MOP to the MS, MOP to re-send new MTDs.	✓			Not required for new organisations entering the market as MHHS MEM only.
MEM (MHHS)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-MS-001	In the case of Smart Meters only, 'Skeleton' D0150 is sent by outgoing MS to both new Supplier and incoming MOP with the following business rules: - All mandatory data items are populated - If unknown, the value of the Manufacturers Make and Type is noted as 'not recorded' - Meter Register Details is only populated with Smart Meter Cumulative Register. TOU registers are not included		✓	✓	
MEM (MHHS)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-MS-002	Outgoing MS to adhere to BAU Design SLAs in the sending of MTDs to the new MOP.		✓		
MEM (MHHS)	Reverse Migration	Change of Agent	MHHS-RMigration-CoA(MS)-MS-003	If outgoing MS is requested to transfer MTDs manually to incoming MOP and DC, they must action this within 5 working days.	✓	✓		

Market Role	Migration Scenario	Area	MHHS Reference	MHHS Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
MEM (MHHS)	Cancellation of Migration	Change of Agent	MHHS-Migration-Can-MS-001	Registration Service cancels a CoA Migration and follows the BAU de-appointment process.		✓		
MEM (MHHS)	Cancellation of Migration	Change of Supply	MHHS-Migration-Can-MS-002	Registration Service cancels a CoS Migration and follows the BAU de-appointment process.		✓		
MEM (MHHS)	Miscellaneous	All	MHHS-Migration-Mis-MS-001	All Agents will need to have made changes to their services and business processes by M11 to support the Migration of MPANs away from their portfolios when a Migration CoS occurs.	✓			
MEM (MHHS)	Miscellaneous	All	MHHS-Migration-Mis-MS-002	All Agents wishing to operate the Reverse Migration process (to Switch consumers whose MPAN is under the MHHS arrangements) must have made changes to their services and business processes by M11.	✓			
MEM (MHHS)	Miscellaneous	Change of Supply	MHHS-Migration-Mis-MS-003	Reverse Migration: MS to adhere to the SLAs specified within the MHHS BAU Design as part of the various MTD sharing processes, unless explicitly called out.		✓		
MEM (MHHS)	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-MS-004	When sending and processing DIP messages, MS's to adhere to the BAU MHHS Design SLAs, which will apply unchanged throughout the Migration period.		✓		
MEM (MHHS)	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-MS-005	MS's to send all Legacy Data Flows via the DTN or via other agreed means.		✓		
MEM (MHHS)	Miscellaneous	Change of Agent or Change of Supply	MHHS-Migration-Mis-MS-006	If MTDs change so MOP needs to re-send MTDs to MS, MS to supersede old MTDs with those that have been received most recently and use these details instead.	✓	✓		

4.3 NON-FUNCTIONAL REQUIREMENTS (NFR)

The following assessment criteria to cover MHHS Non-Functional Requirements by role has been developed by the REC Code Manager based on MHHS-DEL2128 NFR Categorisation v2.0 and presented to REC PAB for approval on 26 March 2024. This may be updated as further information is published by the MHHS Programme.

4.3.1 ALL ROLES – DNO (INCLUDING REGISTRATION SERVICE), SUPPLIER AND MEM

Market Role	NFR Category	NFR Sub-Category	NFR Reference	NFR Title	NFR Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
All	Compatibility	Interoperability	E2E0014	Messaging Interfaces	All services shall send and receive messages for all DIP interfaces and publications via the API definitions in the MHHS Swagger documentation (E2E003)		✓	✓	Demonstrated through Functional Testing.
All	Compatibility	Interoperability	E2E0108	Message Validation (Level 1)	All services shall interpret the http response code to determine the outcome of DIP validation level 1 for each message sent referenced by Sender Unique Reference & Transaction Id		✓	✓	Demonstrated through Non-Functional Testing.
All	Compatibility	Interoperability	E2E0109	Message Validation (Level 2)	All services shall connect to the Receive Status Messages webhook DIP to establish the outcome of level 2,3,4 validation with messages referenced by Transaction Id		✓	✓	Demonstrated through Functional Testing.
All	Compatibility	Interoperability	E2E0201	Schema validation	Services shall undertake Level 3 message validation including structure and the format of individual data fields/elements shall be performed against the appropriate message schema definition of all interface interactions.		✓	✓	Demonstrated through Functional Testing.
All	Compatibility	Interoperability	E2E0207	Content Validation	Level 4 validation of the message content shall be established during processing by the Recipient and reported back to the Sender via the Send Status Messages API using the corresponding status code		✓	✓	Demonstrated through Functional Testing.
All	Compatibility	Interoperability	E2E0211	Message Receipt	All messages received by DIP Participant systems shall be initially acknowledged as received in the http response of the API transaction		✓	✓	Demonstrated through Functional Testing.
All	Performance Efficiency	Capacity	E2E1004	Message Throughput	All Services (see exceptions) shall have capacity to process the following volumes of messages: - average daily volume of 66,000 - peak daily volume of 300,000 - average hourly volume of 2,750 - peak hourly volume of 35,000 - annual volume of 24M		✓		As the Qualification Testing Framework (QTF) and Participant systems used in Qualification Testing are not expected to be scaled environments, Code Bodies will rely on PIT to assure Participants' ability to meet this requirement.
All	Performance Efficiency	Capacity	E2E1005	Message Throughput (Secure Active)	All Services (unless explicitly referenced below) shall have capacity to process the following volumes of messages: - peak daily volume of 300,000 2,100,000 * portfolio coefficient - peak hourly volume of 300,000 2,100,000 * portfolio coefficient - annual volume of 110M * portfolio coefficient		✓		As the Qualification Testing Framework (QTF) and Participant systems used in Qualification Testing are not expected to be scaled environments, Code Bodies will rely on PIT to assure Participants' ability to meet this requirement.

Market Role	NFR Category	NFR Sub-Category	NFR Reference	NFR Title	NFR Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
All	Performance Efficiency	Capacity	E2E1006	Message Channel Scalability	All services shall be designed to cope with an increase in message volumes of 25% over 5 years	✓	✓		Demonstrated through Non-Functional Testing.
All	Performance Efficiency	Capacity	E2E1007	Message Throughput (Transition)	During transition all meter points (ca. 31M) will be transition between the old and new services. Therefore, assuming a linear migration over the year this would result in the load below, hence services shall be capable of processing the following volumes: - average daily volume of 680,000 - peak daily volume of 2.4M 5.0M - annual volume of 248M 500M	✓	✓		Demonstrated through Non-Functional Testing.
All	Performance Efficiency	Resource Utilisation	E2E0208	Participant Message/Event Consumption	DIP Participants shall be able to process messages at their own speed, independently to other consumers	✓	✓		Demonstrated through Non-Functional Testing.
All	Performance Efficiency	Resource Utilisation	E2E1008	Message Pattern B Payloads	Services sending messages via the 'Pattern B' model shall provide a publicly available (or using a Federated Identity Management (FIM) capability) URI location that other Services/ Market Participants can access and download content		✓	✓	Demonstrated through Functional Testing.
All	Performance Efficiency	Time behaviour	E2E0101	API Message Capacity	All services shall have the capability to control the number of messages that are sent within a single API call	✓	✓		As the Qualification Testing Framework (QTF) and Participant systems used in Qualification Testing are not expected to be scaled environments, Code Bodies will rely on PIT to assure Participants' ability to meet this requirement.
All	Performance Efficiency	Time behaviour	E2E1003	Level 3 Processing Times (synchronous)	All Services shall provide an initial synchronous response (Level 3 validation) to a message within the following timeframes: - up to average hourly volume, mean response time of 2s or less - up to average hourly volume, 90th percentile response time of 4s or less - from average hourly to peak hourly volume, mean response time of 5s or less - from average hourly to peak hourly volume, 90th percentile response time of 8s or less		✓		As the Qualification Testing Framework (QTF) and Participant systems used in Qualification Testing are not expected to be scaled environments, Code Bodies will rely on PIT to assure Participants' ability to meet this requirement.

Market Role	NFR Category	NFR Sub-Category	NFR Reference	NFR Title	NFR Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
All	Performance Efficiency	Time behaviour	E2E1009A	Level 4 Processing Times (Asynchronous)	All Services shall provide an asynchronous response (Level 4 validation) to a message within the following timeframes - up to average hourly volume, mean response time of 6s or less - up to average hourly volume, 90th percentile response time of 12s or less - from average hourly to peak hourly volume, mean response time of 10s or less - from average hourly to peak hourly volume, 90th percentile response time of 16s or less		✓		As the Qualification Testing Framework (QTF) and Participant systems used in Qualification Testing are not expected to be scaled environments, Code Bodies will rely on PIT to assure Participants' ability to meet this requirement.
All	Reliability	Availability	E2E0105	Participant Back Off & Retry	Each service after invoking a DIP API shall implement an exponential backoff and retry with jitter policy in the event of a comms failure with the DIP resulting from a http 429 response	✓	✓	✓	Demonstrated through Non-Functional Testing. QT will follow the approach taken in SIT.
All	Reliability	Availability	E2E0106	Message/Event Buffering	In the event of a failure to communicate with the DIP, the Service shall be able to buffer messages for a period of at least 72 hours		✓		
All	Reliability	Availability	E2E0206	Message/Event Receipt	In the event of a failure to communicate with the DIP, Participant systems shall be able to buffer messages for a period of at least 72 hours	✓	✓	✓	Demonstrated through Non-Functional Testing. QT will follow the approach taken in SIT.
All	Reliability	Availability	E2E0402	Participant Downtime	When participant systems/services are unavailable from both unplanned and planned outages the outage shall be communicated to the DIP via e-mail or via the DIP portal **TBC once DIP governance procedures are available**	✓			Non-Testable so covered through self-declaration as part of QAD.
All	Reliability	Availability	E2E1001	Service Availability	All services (those components that physically interface with the DIP, i.e. send and receive messages), unless explicitly defined, shall have an availability of 98% outside planned outage periods	✓			Non-Testable so covered through self-declaration as part of QAD.
All	Reliability	Availability	E2E1009B	Unplanned Outages	All services (involved in BP affecting the Secured Active process), shall not plan outages within the Secured Active processing window	✓			Non-Testable so covered through self-declaration as part of QAD.
All	Reliability	Fault Tolerance	E2E0204	Participant Idempotency (SUR)	Participant systems shall check for duplicate messages with the same SUR under Level 3 or Level 4 validation		✓	✓	Demonstrated through Non-Functional Testing.
All	Reliability	Fault Tolerance	E2E0205	Participant Idempotency (Transaction Id)	Participant systems shall check for duplicate messages with the same Transaction Id under Level 3 or Level 4 validation		✓	✓	Demonstrated through Non-Functional Testing. QT will follow the approach taken in SIT.
All	Reliability	Fault Tolerance	E2E0210	Participant Idempotency	In terms of handling messages all participant systems shall be idempotent and have mechanism for handling duplicate messages		✓	✓	Demonstrated through Non-Functional Testing.

Market Role	NFR Category	NFR Sub-Category	NFR Reference	NFR Title	NFR Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
All	Reliability	Maturity	E2E0401	Participant Software/Systems	Participants shall maintain all DIP facing systems so that all operating system, programming languages and their runtime libraries are at minimum supported versions from their respective vendors	✓			Non-Testable so covered through self-declaration as part of QAD.
All	Reliability	Maturity	E2E0404	Participant Software/Systems	Participants shall maintain all DIP facing systems so that all operating system, programming languages and their runtime libraries are at recommended supported versions from their respective vendors	✓			Non-Testable so covered through self-declaration as part of QAD.
All	Reliability	Recoverability	E2E0011	Data Loss	There shall be no data loss in the event of a single component failing	✓	✓		
All	Reliability	Recoverability	E2E0403	Participant Data Retention	Participant systems shall maintain an archive of all transactional data for 24 months	✓			Non-Testable so covered through self-declaration as part of QAD.
All	Reliability	Recoverability	E2E1002	Service Recovery	In the event of an unplanned outage, each service shall be able to resume operation within 1 hour.	✓	✓		
All	Security	Accountability	E2E0012	Instance Separation	DIP Participants shall ensure measures are put in place to ensure separation of production and non-production environments	✓			Non-Testable so covered through self-declaration as part of QAD.
All	Security	Authenticity	E2E0103	Signing Messages	All Services shall digitally sign messages		✓	✓	Demonstrated through Functional Testing.
All	Security	Authenticity	E2E0202	Signing Messages	All services shall check that messages are digitally signed with the correct certificate from the Sender of the message	✓	✓	✓	Demonstrated through Functional Testing.
All	Security	Non-repudiation	E2E0102	Sender Unique Reference	All Services shall generate a Sender Unique Reference (SUR) for each message/event		✓	✓	Demonstrated through Functional Testing.
All	Security	Non-repudiation	E2E0104	Sender Unique Reference/ Transaction Id	All Services shall use DIP generated Transaction Ids returned in the response body of the API transaction to map against messages for audit and tracking purposes		✓	✓	Demonstrated through Functional Testing.
All	Security	Non-repudiation	E2E0107	Message Receipt	When sending messages all services shall use the http response of the API transaction to establish whether a message has been received by the DIP		✓	✓	Demonstrated through Functional Testing.

Market Role	NFR Category	NFR Sub-Category	NFR Reference	NFR Title	NFR Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
All	Security	Non-repudiation	E2E0209	Message/Event Replay Response	DIP Participants shall put in measures to differentiate the processing of replayed messages c.f. original messages		✓	✓	Demonstrated through Non-Functional Testing.
All	Usability	Operability	E2E0203	Error Reporting	When Level 3 validation fails, e.g. when payload contents cannot be reconciled (schema validation), a response with the corresponding error code shall be reported back to the DIP via the http response in the webhook call-back		✓		

4.4 OPERATIONAL REQUIREMENTS

The following assessment criteria to cover MHHS Operational Requirements by role has been developed by the REC Code Manager based on MHHS-DEL2417 SIT Operational Approach and Plan v1.0 and MHHSP-OPC001 Operational Choreography v5.4 and presented to REC PAB for approval on 25 June 2024. This may be updated as further information is published by the MHHS Programme.

4.4.1   ALL ROLES – DNO (INCLUDING REGISTRATION SERVICE), SUPPLIER AND MEM

The following requirements will be assessed on the basis of the review of QAD responses and supporting evidence provided by the Participant (including evidence from PIT). The REC Code Manager does not intend to require

Participants to test these during Qualification Testing:

- Operational processes for system maintenance, capacity management and change management.
- Business Continuity and Disaster Recovery processes
- Service Management processes including error handling, fault resolution and escalation.
- Security testing and processes for access management, etc. NB: The DIP Manager is responsible for assuring Participant readiness to operate DIP onboarding/offboarding procedure. The REC Code Manager will not conduct any additional assurance and will rely on the DIP Manager's review.
- Operation of controls to ensure Code obligations are met, including monitoring, reporting, etc.
- System availability and performance. Participants are expected to demonstrate evidence that they have tested and proven systems by deploying them in the end state architecture.

The following requirements will be assessed through the QAD review as well as through review of testing evidence from PIT and/or SIT/QT:

- Business requirements not covered in functional testing. For example, requirements for data management, reporting, etc.
- Operational choreography to ensure Participant systems are capable of processing and responding to market messages in line with Code requirements. These include:

DNO	Supplier	MEM	Document reference	Section reference	Reference ID	Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
	✓		MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.3	OPC_120	The Supplier shall be able to process the IF-002 from the Registration Service and send the corresponding IF-031 within 60 minutes of receiving the IF-002.	✓	✓	✓	In QT, testing may be combined with Functional Testing scenarios
✓			MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.3	OPC_130	The Registration Service shall be able to process the IF-031 from the Supplier and send the corresponding IF-032 to Supplier and IF-033 to the Metering Service within 60 minutes of receiving the IF-031.	✓	✓	✓	In QT, testing may be combined with Functional Testing scenarios
	✓		MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.3	OPC_140	The Supplier shall systematically process 90% of IF-032 from the Registration Service and respond with an IF-031 within 60 minutes with the residual being processed by the end of the following working day.	✓	✓		
		✓	MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.3	OPC_150	The Metering Service shall systematically process 90% of IF-033 from the Registration Service and respond with an IF-034 within 60 minutes with the residual being processed by the end of the following working day.	✓	✓		

DNO	Supplier	MEM	Document reference	Section reference	Reference ID	Requirement Description	QAD Question	PIT Evidence	SIT / Qualification Testing Evidence	Further comments on coverage
✓			MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.3	OPC_160	The Registration Service shall be able to process the IF-034 from the Metering Service and send the corresponding IF-035 within 60 minutes of receiving the IF-034.	✓	✓	✓	In QT, testing may be combined with Functional Testing scenarios
		✓	MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.3	OPC_170A	The Losing and Gaining Metering Service shall be able to process the IF-035 from the Registration Service within 60 minutes of receipt.	✓	✓	✓	In QT, testing may be combined with Functional Testing scenarios
		✓	MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.3	OPC_170B	The Losing Metering Service shall be able to issue Advanced or Traditional MTDs to the Gaining Metering and Data Services within 120 minutes of receipt of the IF-035.	✓	✓	✓	In QT, testing may be combined with Functional Testing scenarios
✓			MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.4	OPC_180	On receipt of Secured Active Message at Gate Closure from CSS, the Registration Service shall issue all associated IF-035, IF-036 and IF-037 before 21:00.	✓	✓	✓	In QT, testing may be combined with Functional Testing scenarios
	✓	✓	MHHSP_OPC001_Operational_Choreography v5.4.pdf	4.4	OPC_190	The Gaining Supplier and Metering Service shall process the inbound IF-035 within 60 minutes of receipt.	✓	✓	✓	In QT, testing may be combined with Functional Testing scenarios
