**Q1. As all Parties (including all DNOs) are not part of the SIT A Environment, would an enduring end to end test environment for all Parties not be more suitable?**

This falls under a different governance structure and is outside of the Programme's ability to influence. If a new environment were required, this would be a very different Change Request. This request is purely with a focus on the Early Life Support period.

**Q2. Can I clarify it would not be mandatory for DS to continue to use the SIT-A, post SIT Exit and Qual - i.e. this is optional for those who'd want to use it?**

The intent of this request is as an optional service for parties to use; however, there is a limitation due to the cohort requirement of the environment, and therefore, if there is a request to use the SIT A environment, then the cohort would be required to support this.

**Q3. What will happen to existing SIT A Test Data. Will this remain available should a Party be audited / require access to SIT test evidence at future date?**

All existing MPANs used within the SIT-A environment will remain until the environment is decommissioned at the agreed date. No data is expected to be cleared down or removed from the test environment from now until the published end date. This CR would extend that date and so any MPANs used for SIT-A settlement testing or SIT Regression test phase will remain within the environment alongside any additional MPANs used for Early Sandbox Testing until the SIT-A environment end date which is proposed to move from 24-Oct-25 through to the end of ELS (currently forecast for 22-Jan-26).
